

Specification

Overview

The WPR2 Series Remote Wet to Wet Differential Pressure Transmitter is designed to reduce installation time and provide mounting flexibility, often eliminating the need for additional plumbing. They accurately measure wet media pressures in a variety of applications. Commonly used for monitoring pumps, these devices are also ideal for measuring pressure across filters, heat exchangers and compressors. The dual remote sensors are based on a ceramic capacitive sensing element with ¼"-18 NPT male (304 stainless steel) fittings. The WPR2's enclosure opens conveniently to allow it to be reconfigured between three additional ranges (see Specifications) and outputs of 4 to 20 mA, 0 to 5 VDC, or 0 to 10 VDC (default). The different configurations in this series can measure both uni or bi-directional pressure ranges as low as 3 psi and as high as 300 psi, depending on the unit. The WPR2 also features a push button auto zero function for remote calibration. The different configurations in this series can measure both uni or bi-directional pressure ranges as low as 3 psi and as high as 300 psi, depending on the unit.

The LCD option displays pressure values for both the High and Low side pressures, a differential pressure value, "OVR" for values over the specified range, "ERROR" for differential pressures out of range, and "ZERO" when the auto-zero is in process.

Applications: Monitoring Pumps, Compressors, Filters, Heat Exchangers, Flow

Remote Wet to Wet Differential Pressure Transmitter

N2-A/WPR2 Series- 8/23/23

Specification

Installation and Operation

Mounting Instructions

The WPR2 is supplied with 4 mounting flanges. The mounting flanges must be installed onto the bottom of the enclosure. Align the mounting flanges with the threaded insert on the bottom of the enclosure. Insert and tighten down the screws.

Find a suitable location for the enclosure. Drill pilot holes for the (4) mounting screws. Use the enclosure flange as a guide, or use the dimensions listed in FIGURE 1 to measure out.

Wiring Instructions			
A Warning	• Remove power before wiring. Never connect or disconnect wiring with the power applied. Do not allow live wires to touch the circuit board.		
Caution	 An isolation transformer is recommended when powering the device with 24vac. Do not run the wiring in any conduit with line voltage. Failure to wire devices with the correct polarity when using a shared transformer may result in damage to any device powered by the shared transformer. Do not switch pressure range and output mode when power is on. Make sure to power off the unit first, then move jumpers to the right positions and then power on the transmitter. Do not apply any external voltage to zero terminals. Do not replace pressure sensors with any other sensors. Do not interchange the high and low sensors. The high and low sensors are specifically calibrated to the WPR2 unit. Any changes to the sensors will void the product warranty. 		

- 1. Open the cover of the enclosure.
- 2. Shielded cable with 16 to 22AWG conductors is recommended. Twisted pair may be used for 2-wire current output transmitters or 3-wire for voltage output.
- 3. Each WPR2 unit can be configured to three output modes: 4-20mA, 0-5V and 0-10V. Use the **Wiring Connections** table below to determine the proper wiring for your application. See the table below for Output Mode and Output Signal switch positions. All wiring must comply with local and National Electric Codes.
- 4. After wiring, close the cover.

NOTE The WPR2 units are shipped from the factory set up with a 0-10 VDC output.

N2-A/WPR2-30-M20-A, N2-A/WPR2-100-M20-A, N2-A/WPR2-300-M20-A					
Output Signal (SW8)	Output Mode (SW7 Position 2)	Supply Voltage	Wire Connection		
Vout	0-5 VDC (5V)	VAC/VDC	V+	COM	VOUT
Vout	0-10 VDC (10V)	VAC/VDC	V+	COM	VOUT
mA	4-20 mA	VDC	V+		IOUT
mA	4-20mA	VAC	V+	COM	IOUT

Installation and Operation

N2-A/WPR2 Series- 8/23/23

Wiring Connections

Auto Zero

The WPR2 unit should be "ZEROED" before the pressure transducers are installed on the pipes. The Auto zero button and remote zero are both used to cancel out the offsets caused by installation and sensor drift.

NOTE Make sure a minimum of 10 minutes of warm-up time before adjustment to the ZERO.

The Auto Zero adjustment should only be performed with NO pressure applied to both sensors.

- 1. Shut off your main pressure valve and open a shutoff valve with hose drain to equalize the pressure in the line to your atmosphere.
- 2. Remove the sensors from the system to remove pressure from each sensor to achieve equal pressure.
- Push "ZERO" button or "SHORT ZERO PIN" for 2 seconds to "COM PIN" before installation or when it is necessary. 3.

Reapply the pipe tape, thread sealant, or pipe compound before sensor installation.

Caution

N2-A/WPR2 Series- 8/23/23

Carriei

Installation and Operation

For units with LCD display:

"ZERO" icon will be on when the push button is released. If auto zero is successful, "ZERO" icon will flash twice, otherwise "ERROR" and "OVR" icons will flash twice.

Pressure Connections

The WPR2 Series have 1/4"-18NPT male fittings.

A	•	The sensors are labeled "SENSOR HIGH" and "SENSOR LOW"; MAKE SURE THE SENSORS ARE WIRED TO THE CORRESPONDING TERMINAL BLOCK INSIDE THE HOUSING.
Caution	•	Otherwise We will not guarantee the accuracy specifications. DO NOT REPLACE SENSORS WITH ANY OTHER SENSORS. THE WPR2 UNITS ARE CALIBRATED WITH THE HIGH AND LOW SENSORS SUPPLIED WITH THE UNIT.

WPR2-300 units can handle a proof pressure of 600 psi for both HIGH and LOW pressure sensors. All other **WPR2** units can handle a proof pressure of **3X THE MAXIMUM LINE PRESSURE** for both HIGH and LOW pressure sensors. If after connecting the pipe, the unit outputs out-of-range signal **OVR** on display only turn off the unit, disconnect the pipe or shut down the valves immediately and check the pressure input with a gauge or other test instrument.

A Pressure Snubber^{*} is included with each sensor to dampen pressure surges. A pigtail siphon should be used to lower the media temperature below 257°F (125°C) to prevent damage to the pressure sensor.

*WPR2-300 Pressure Snubbers are optional.

Input Range Adjustment

- Do not switch pressure range and output mode when power is on. Make sure power to the unit is off. Failure to do so will not allow any new switch settings to take place.
- Choose differential range based on the expected differential pressure in your application. Move switches to the correct positions and then power on the transmitter.
- Maximum line pressure

Configuration	Maximum Line Pressure
WPR2-30	30 PSI
WPR2-100	100 PSI
WPR2-300	300 PSI
HH/WPR2-300	600 PSI

The WPR2 can operate in either unidirectional mode (0 - X PSI) or bidirectional mode $(\pm X PSI)$. The unit will set at unidirectional mode after factory calibration.

Installation and Operation

Unidirectional Mode

- DIP switch SW7 position 1 set at UNI side.
- DIP switch SW7 positions 4 and 5 are for Range Selection

Bidirectional Mode

- DIP switch SW7 position 1 set at **BI** side.
- DIP switch SW7 positions 4 and 5 are for Range Selection

NOTE In Bidirectional mode, a value of 0 PSID will have an output equal to 50% of the full output range (12mA, 2.5V, 5V).

11-808-774-01

Remote Wet to Wet Differential Pressure Transmitter

Installation and Operation

Engineering Units Adjustment

This option is ONLY for units with LCD display. Switch DIP switch SW7 position 3 to select PSI or BAR.

Advanced Features

For units with LCD display:

LCD Engineering Units Adjustment

Switch DIP switch SW3 position three to select BAR or PSI. If switched with power on, unit change will not take place until power is cycled.

- ERROR icon will be on when differential pressure is out of range.
- OVR icon will be on when gage pressure is out of range on either the high or low port.

Installation and Operation

Troubleshooting

Problem	Trouble Shooting Steps
"ERROR" icon on Display will be on when differential pressure is out of range. The differential pressure could be lower or higher than the selected range.	 Verify the HIGH Sensor Voltage is between 0.5 VDC (0 PSI) and 4.5 VDC (Max. Line Pressure) When measuring from the HIGH Sensor terminal Block "GND" to "OUT". If out of range call technical support.
"OVR" icon on Display will be on when the input pressure is > than Max Line Pressure. Check pressure input with a gauge or other test instrument. The WPR2-300 Series is available	 Verify the LOW Sensor Voltage is between 0.5 VDC (0 PSI) and 4.5 VDC (Max. Line Pressure) When measuring from the LOW Sensor terminal Block "GND" to "OUT". If out of range call technical support.
for pressures over 100 PSI.	 Verify in Uni-Directional Mode that the HIGH Sensor Voltage is ≥ the LOW Sensor Voltage. If voltage is anything different call technical support.
Output reading @ 4mA or 0 VDC all the time	 Verify proper Supply Voltage at the transducer meets the Product Specifications.
	 Verify 5 VDC Reference voltage across "VIN" to "GND" terminals for both the HIGH & LOW Sensor terminal blocks. If voltage is anything different than 5VDC call technical support.
Erroneous Readings	1. Bleed Air from System.
	2. Repeat the Auto Zero calibration on page 2.
Output signal reads half with no pressure applied. i.e.: 5V output on a 0-10V selection.	Verify SW7 #1 is set to UNI. Cycle power to confirm the change.
