

GEOHERMAL COMFORT SYSTEMS

featuring

RO454B

Models HCR, HSR, HWR, HBR

DESIGNED WITH YOUR COMFORT IN MIND

Geothermal systems offer incredible energy efficiency and long-term cost savings, and they can create a more even, consistent level of comfort in your home. Within our geothermal family of products, KeepRite offers a wide variety of units, features and options, ensuring we have a geothermal system your family can depend on. For the homeowner who expects more from their heating and cooling system, our geothermal comfort systems, offers just that.

Efficient

Geothermal systems can save homeowners 33-65% in annual heating and cooling costs compared to traditional HVAC systems.¹

Dependable

Geothermal systems are built to last. Made from high-quality materials, their placement inside the home and out of the weather means they can operate for years virtually maintenance-free.

Comfortable

Geothermal systems utilize moderate ground temperatures to ensure you and your family enjoy consistent, comfortable temperatures throughout your home with optimal humidity and zero hot or cold spots.

Green

Geothermal systems reduce your carbon footprint today and for future generations. In fact, geothermal systems can reduce CO₂ emissions by 25-65% compared to traditional heat pumps.¹

Cost-Effective

Because of the extremely low cost of operating a geothermal system compared to ordinary heating and cooling systems, existing homes could recover the added cost of the system within 5 - 7 years. New home builds could be saving money from day one. You can even use excess heat from system operation to supplement your water heater.

Quiet

Unlike ordinary heating and cooling systems, geothermal systems require no outdoor unit. Our products include heavy-duty sheet metal cabinets, high-density insulation, and a double-insulation mounted compressor for quiet operation.

Exceptional Peace of Mind

Our Geothermal Products come with a No Hassle Replacement limited warranty on qualifying models. This means comfort with no questions. An additional ten-year parts and five or ten-year labor limited warranty is available upon timely registration.²

HOW GEOTHERMAL MAKES THE MOST OF THE EARTH'S ENERGY

Geothermal offers an energy-efficient, cost-effective space conditioning system that taps into the earth to capture its renewable energy.

The sun heats the earth, which then stores about 47% of that energy in the ground. Just a few feet below the frost line, the temperature remains between 55 and 70 degrees all year round in many climates.

WINTER

A geothermal system extracts the energy stored in the earth during the winter, concentrates that energy through compression, and then uses it to heat your home. So instead of heating using ice-cold air like an ordinary heat pump, geothermal systems make the most of heat that already exists in the ground.

SUMMER

In the summer, the process is reversed. A geothermal system extracts the heat from your home and transfers that heat to the ground. Unlike ordinary cooling systems that are forced to dispose of excess heat into hot air, the cool ground just a few feet below the surface is ready to accept that heat.

RENEWABLE ENERGY FROM THE EARTH

Geothermal systems can be installed with a variety of loop system configurations. "Closed loops" use recirculated fluid in a series of pipes installed vertically, horizontally, or in a pond. "Open loops" use well water. Your dealer will determine which design works best for your home.

Horizontal Loops:

Used on larger lots. Installed using a backhoe or trencher.

Pond Loops:

Coils of pipe are fabricated and sunk to the bottom of the pond.

Vertical Loops:

Used where land area is limited or soil conditions prohibit horizontal loops. Installed using a drilling rig.

Open Loops:

Well water from an existing well can be used, then discharged into a drainage ditch or pond.

RENEWABLE ENERGY TAX CREDITS

Qualified homeowners may be eligible for a tax credit of the installed system cost.

A RANGE OF COMFORT

Geothermal comfort systems offer exceptional quality and year-round operation. You can also enjoy optional supplemental hot water generation to save money on monthly water heating with select models. The system's compressor, combined with a multi-speed blower motor, corrosion-resistant coil, microprocessor control and quiet operation makes geothermal a great choice.

TECHNICAL SPECS	Ion™ Series Model HCR	QuietComfort® Series Model HS****R	QuietComfort Series Model HW****R	Performance Series Model HBR
Application	Package Water-to-Air Heat Pump	Water-to-Air Split System Heat Pump	Water-to-Water Split System Heat Pump	Package Water-to-Air Heat Pump
