

ClimaVision

**GROW YOUR BUSINESS WITH
WIRELESS AUTOMATION.**

Simple, easy to install HVAC automation
made for mechanical contractors.

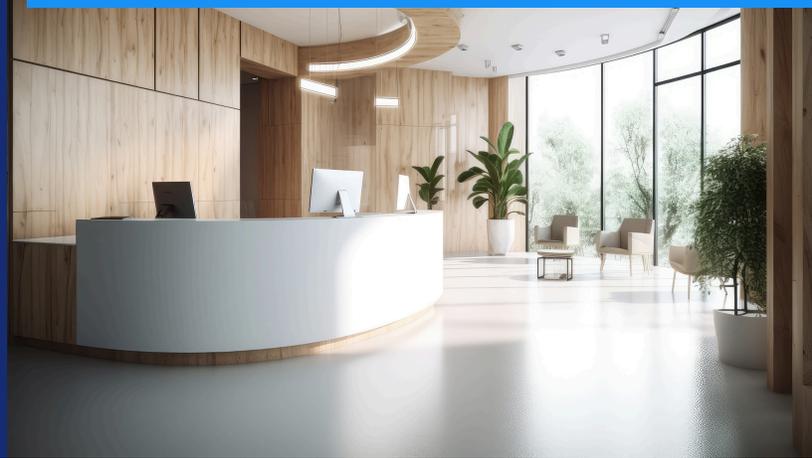

SEIZE THE OPPORTUNITY.

85%

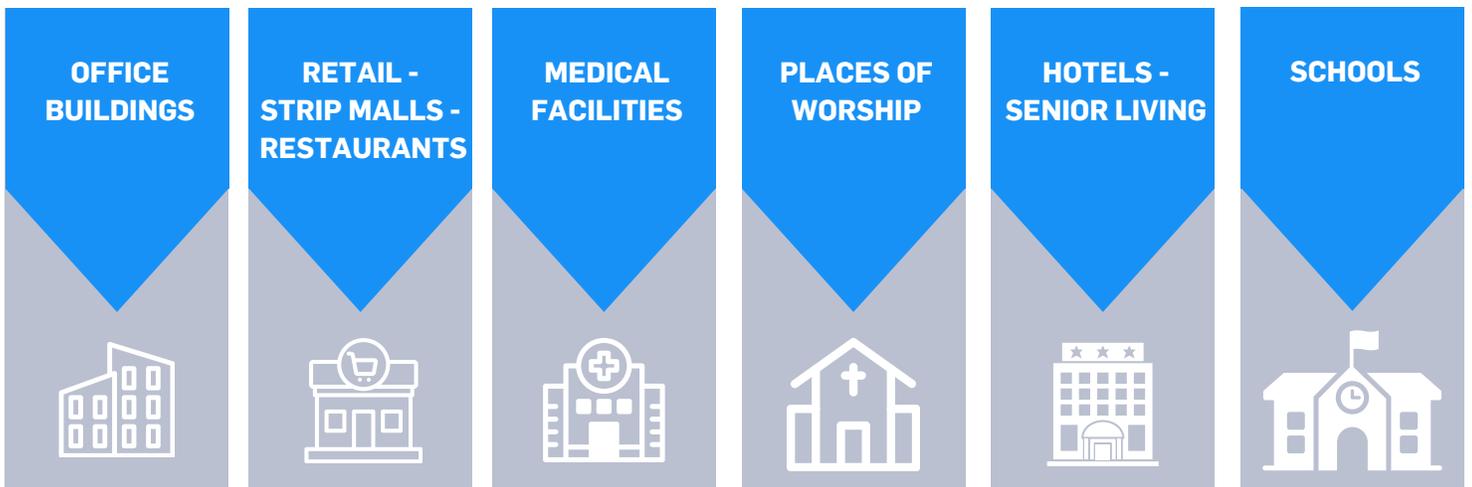

of buildings
under 50k ft²

DON'T HAVE
BUILDING
AUTOMATION
TODAY.*

Building automation is typically reserved for larger buildings due to cost and complexity. Carrier ClimaVision makes automation easy, affordable, and available to small-to-mid-sized buildings.

IDEAL APPLICATIONS

HVAC EQUIPMENT + AUTOMATION =

MORE MONEY

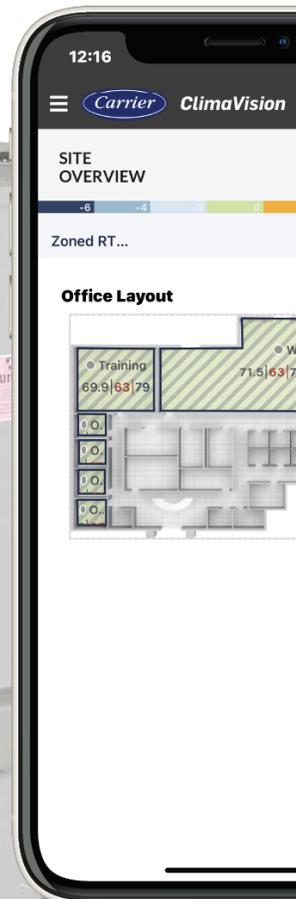

- Add revenue stream beyond HVAC equipment
- Offer new service opportunities
- Upsell to existing clients

MORE OPPORTUNITY

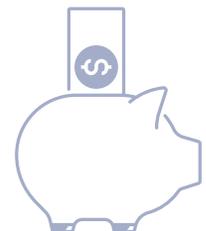

- 85% of small-to mid-sized buildings lack automation
- Untouched market with high revenue potential

MORE VALUE

- Meet growing customer demand for automation
- Deliver capabilities beyond traditional programmable thermostats
- Become customer's single HVAC resource

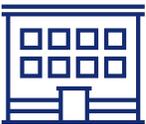

ClimaVision

»»» BUILT FOR CONTRACTORS.

Perfect for Light Commercial Buildings

- Tailored for the spaces you're already servicing
- Addresses common comfort challenges, including temperature, humidity, and air quality
- Supports zoning for improved comfort

Hassle-free Installation

- Designed for mechanical contractors
- Wireless controllers
- Pre-packaged control sequences

Easy to Service

- Remote monitoring and maintenance
- Troubleshooting through standard web browser
- Cloud-connected software for anywhere access

ClimaVision

LOVED BY USERS.

Complete Control

- Convenient mobile app, web user interface, and wall-mounted tablet
- Real-time monitoring and notifications
- Manage single or multiple sites

Affordable, Flexible and Future-Proof

- Works with Carrier and non-Carrier HVAC equipment
- Automatic software & firmware updates (requires internet)
- Wireless connections makes it easy to add more equipment, zones and buildings at any time-cost effectively with minimal disruption

Enhanced Comfort and Energy Savings

- Easy setpoint adjustments
- Advanced scheduling capabilities
- Targeted zone control for better comfort
- Indoor air quality control
- Compliant with industry standards like California Title 24, OpenADR 2.0, and ASHRAE Guideline 36

Quick Installation and ROI

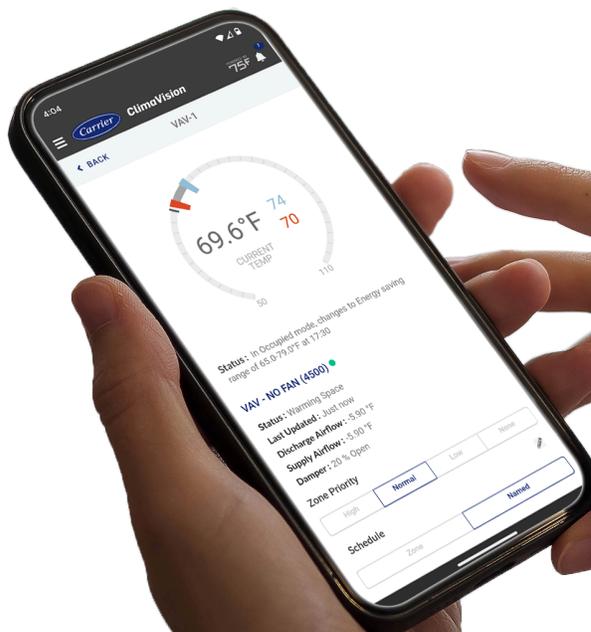

- Wireless controllers help reduce installation costs in both retrofits and new construction
- Out-of-the-box energy saving control strategies include optimal start/stop, occupancy sensing, and demand control ventilation
- Lower installation costs plus advanced energy-saving strategies and features help ClimaVision pay for itself faster—and start delivering a solid return on investment sooner

ClimaVision

ClimaVision is a seamless replacement for aging Carrier VVT systems and offers enhanced features and functionality

COMPLETE CONTROL.

ClimaVision Web User Interface (UI)

Navigate the full-featured graphical UI with ease from any laptop or desktop computer, and enjoy remote monitoring and control across a single building or an entire portfolio.

- View comfort conditions across your building portfolio
- View heatmaps for quick insight into hot and cold spots
- Manage setpoints and schedules
- Access real-time system data
- Generate energy usage reports
- Receive and respond to system alerts
- Manage users and system settings

ClimaVision Central Control Unit (CCU)

Step up to this 8" removable, wall-mounted touchscreen tablet and on-site user interface for building management.

- View comfort conditions
- Adjust setpoints
- Set schedules

ClimaVision Facility Mobile App

Put the power of ClimaVision monitoring and control in the palm of your hand with the official iOS and Android apps.

- View comfort conditions
- View heatmaps
- Change setpoints
- Set schedules
- Receive and respond to system alerts

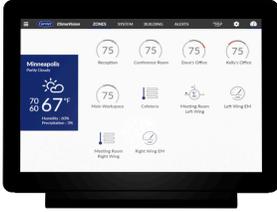

ClimaVision Occupant Mobile App

Makes it easy for designated occupants to manage comfort in their own spaces.

- View current zone conditions
- Use sliders to adjust zone temperature set points
- Create vacation schedules for their zone to save energy

»»» SIMPLE INSTALLATION.

Central Control Unit (CCU)

provides building-wide visibility and management over all zones, with multiple inputs and outputs plus pre-packaged, configurable control sequences for air source control

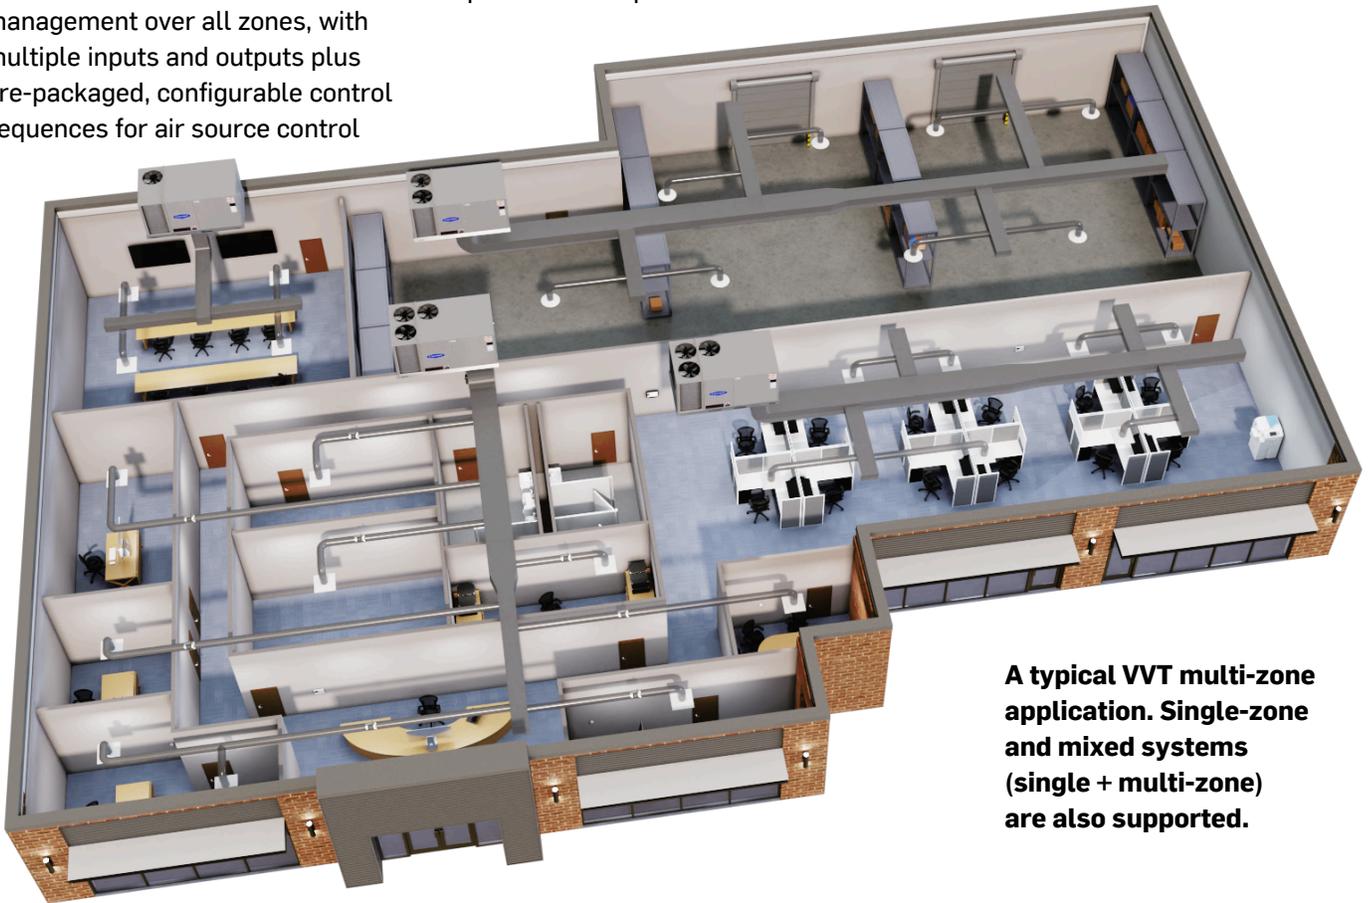

HyperStat Advanced IAQ Thermostat

offers single-zone equipment control, with on-board sensors for occupancy, temperature, humidity, CO₂, VOC, light, sound (dB), and an optional PM2.5 particulate sensor

Smart Node Zone Controller

features multiple inputs and outputs plus prepackaged, configurable control sequences, making it ideal for zoning control

A typical VVT multi-zone application. Single-zone and mixed systems (single + multi-zone) are also supported.

HyperSense Sensor

temperature, humidity, CO₂, VOC, occupancy and PM2.5 (optional) plus user interface and setpoint adjust

Multi Sensor

temperature, humidity, CO₂, and occupancy

Wall Sensor

temperature and humidity

HyperStat Split

for advanced RTU control with support for economizer, DCV, VFD, condensate overflow, filter status and more (Title 24 compliant)
