i-Vu® Building Automation System
## OnGuard® Integration Add-on
Integrated Alarm Management (Part# ADD-OG-IAM)

The OnGuard integration allows the i-Vu building automation system and an OnGuard security system to work together. The OnGuard integration solution consists of three add-ons that you can purchase based on your integration needs.

It starts with the Data Connector add-on, which provides the basic communication connection that is needed to transfer data to and from the OnGuard system. The Data Connector is a required component for the Integrated Alarm Management add-on.

The Integrated Alarm Management add-on enables the exchange of alarms between the i-Vu system and the OnGuard system.

Alarm Data from OnGuard System

Alarm Data Sharing

i-Vu Pro

Centralized Alarm Management

Key Features and Benefits

- **Improve Alarm Coverage** - Facility staff and security staff can monitor each other's alarms so that either team can dispatch appropriate personnel regardless of who is currently on shift. Note, the Alarm Management Add-On is used only as a secondary means of notification.
- **Adjust HVAC to Meet Demand** - Specified alarms can interact with the i-Vu system equipment and initiate on-demand ventilation for real time response.

Compatibility

- i-Vu Pro v8.0 or newer
- Building Integration Platform 1.11 or newer
- OnGuard version must be:
    - v7.5 or later, using the OpenAccess interface
- See requirements in OnGuard v1.1 Integration guide for more details
- Requires Data Connector add-on (Part# ADD-OG-DIP)
