## What is the ProxyConfig add-on?

The i-Vu® v6.5 or 7.0 application or some of its add-ons require information from the Internet and your company has a proxy set up, you must configure the proxy settings for i-Vu® that allow access to the Internet. The ProxyConfig add-on lets you define these settings.

A screenshot of the ProxyConfig add-on interface. It features a "Proxy Settings" section with three checkboxes: "Automatically determine proxy settings" (checked), "Use a proxy" (unchecked), and "Proxy requires authentication" (unchecked). Below this is a "Test URL:" label followed by a text input field containing "http://www.google.com" and a "Testing ..." button. At the bottom is a "Save Configuration and Test" button.

Proxy Settings

☒ Automatically determine proxy settings

☐ Use a proxy

☐ Proxy requires authentication

Test URL: http://www.google.com Testing ...

Save Configuration and Test

## Installing and setting up the ProxyConfig add-on

If your company's internet access has a proxy set up, you must configure the proxy settings to allow some add-ons to access someone else's data. You define these settings in the ProxyConfig add-on.

## Installing the ProxyConfig add-on

See the *Installing an add-on* user guide on the Automated Logic® Partner Community website for instructions on installing the add-on

## Using the ProxyConfig add-on

- 1 If you did not connect to the add-on through the **Main Page** link in the Weather add-on interface on the **Add-on** tab, you can use the following method to access the setup page:

Go to `http://<system IP address>/proxyconfig`.

**NOTE** `/proxyconfig` is case sensitive.

- 2 When you installed ProxyConfig, it automatically tried to determine the proxy settings.
- 3 If it found the settings, the **Host** and **Port** information is filled in for you. If it could not find the proxy settings or, if you are using the i-Vu® Plus application, you need to enter them as follows:
  - a) Uncheck **Automatically determine proxy settings**.
  - b) Check **Use a proxy**.
  - c) Enter the **Host** and **Port** information. You can obtain these from your network administrator.
- 4 Check **Proxy requires authentication** if the proxy requires it, and then enter the **Username** and **Password**. You can obtain these from the network administrator.
- 5 Click **Save Configuration and Test**.

**NOTE** The **Test URL:**`http://` field has an external website address. If the proxy settings are correct, you will see the green text shown below.

The screenshot shows a web interface for configuring proxy settings. It features a text input field labeled "Test URL:" containing the text "http://www.google.com". To the right of the input field, the text "Test through proxy WORKED" is displayed in green. Below the input field is a button labeled "Save Configuration and Test".

- 6 Close the **Setup** page.

## Document revision history

Important changes to this document are listed below. Minor changes such as typographical or formatting errors are not listed.

<b>Date</b>	<b>Topic</b>	<b>Change description</b>	<b>Code*</b>
