

Opening Revit Blocks guide

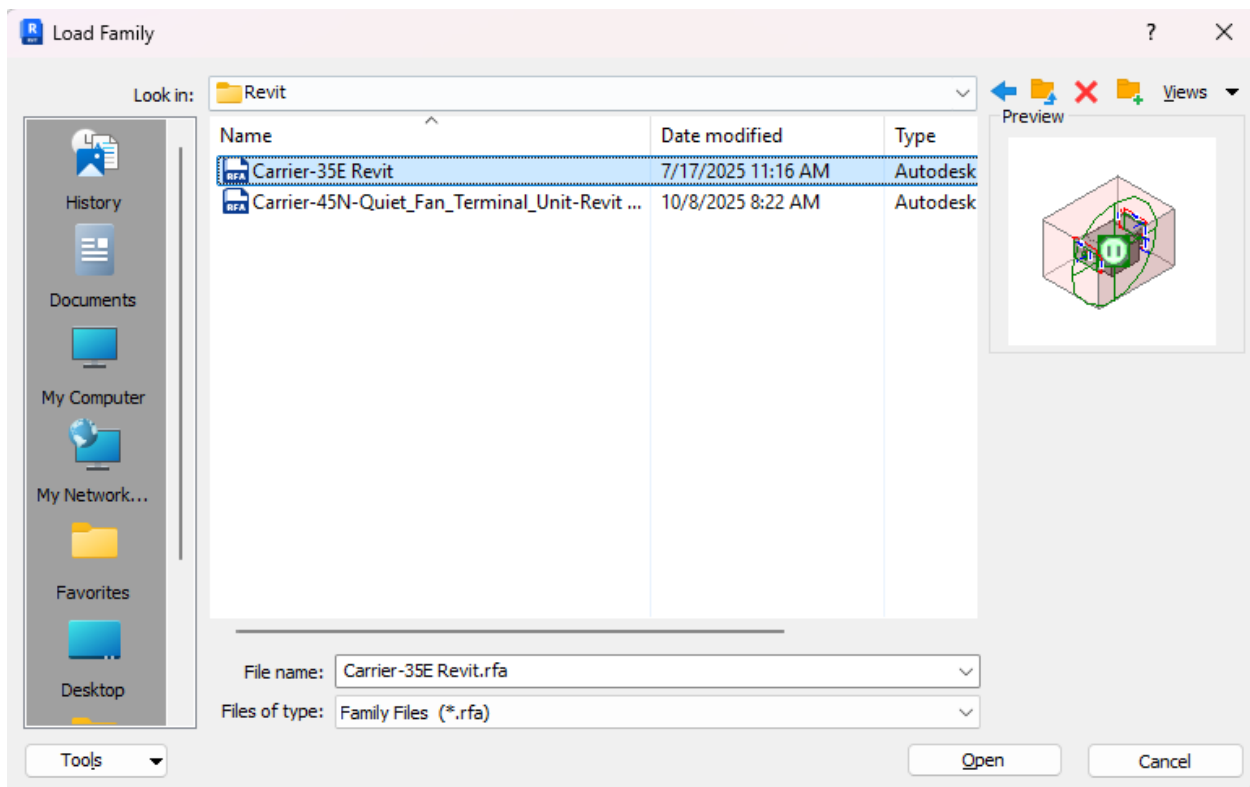

1. Create a new project on Revit via File –

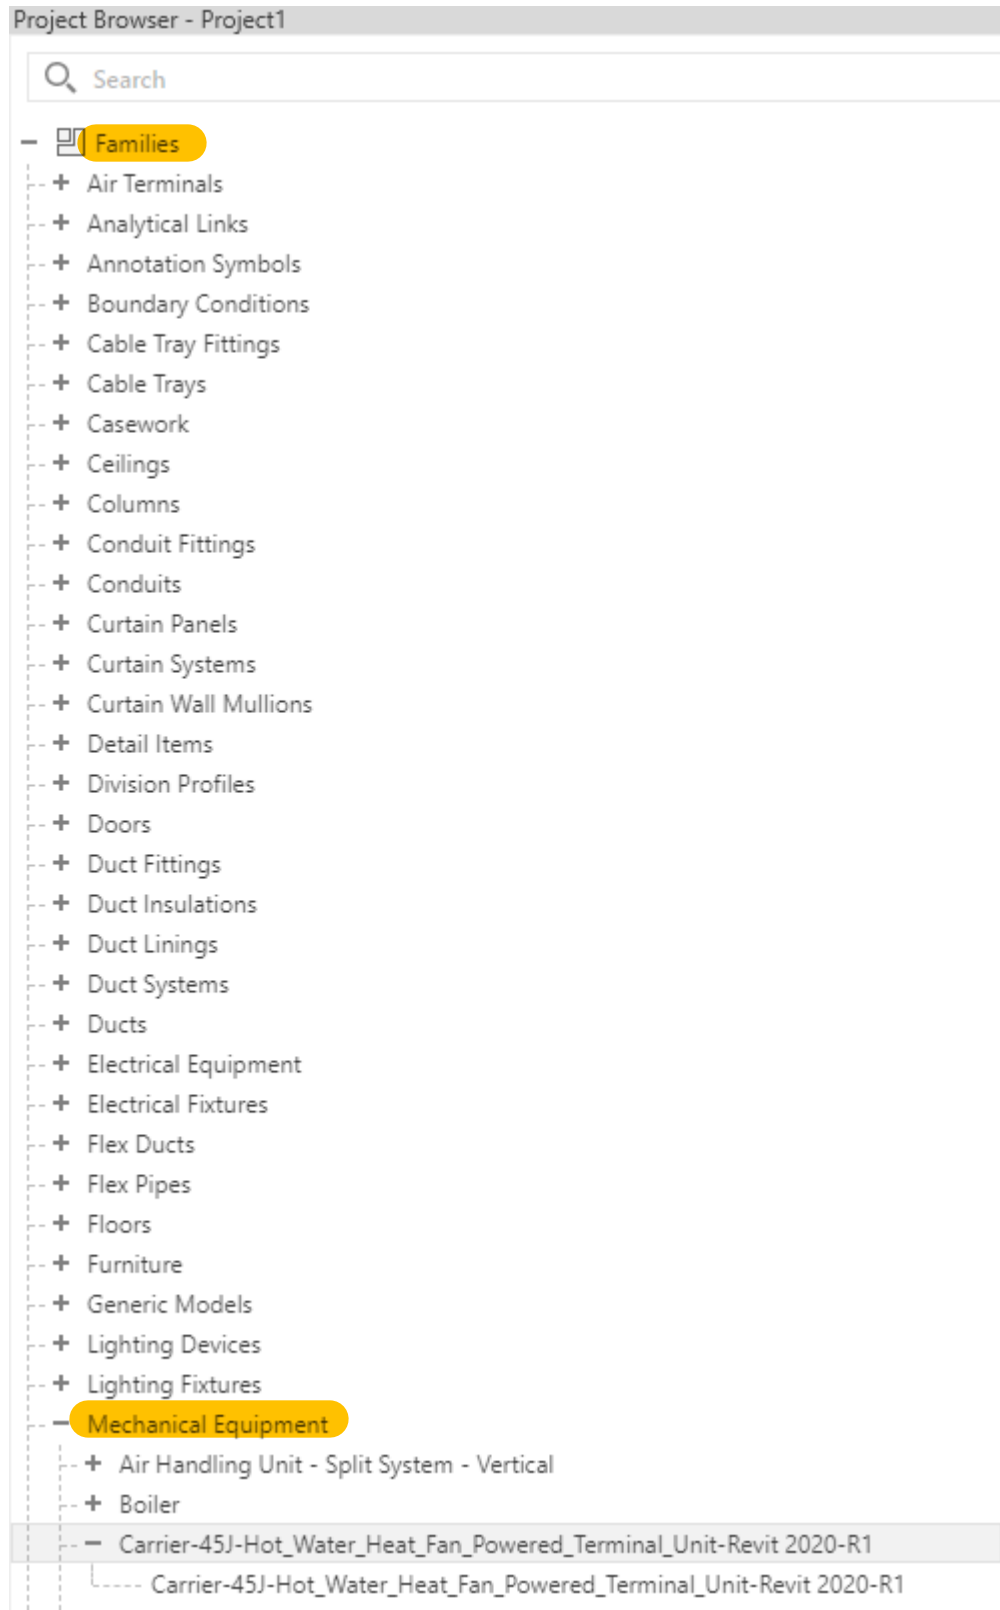

2. Once the project has been created or opened, navigate to the insert tab and ‘Load Family’

3. Navigate to the Revit Block needed –

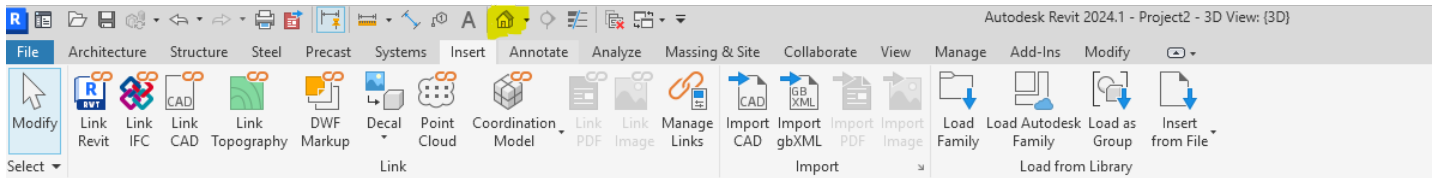

4. Once the desired Revit block is loaded, navigate to '**Families>Mechanical Equipment**' to find the block (under the product tree)-

5. Then drag the sub family onto the project plane. (Left click select the unit and drag onto the plane) –

6. You can then change the view from 2D to 3D by clicking on the house icon at the top

7. The block can then be customized/configured. Click on the block loaded into the plane, then click on 'Edit Type' and a window will pop up with all the configurations options.
