

Aero® Central Station Air Handlers

Factory Installed Variable Frequency Drives

Carrier offers many different Variable Frequency Drive (VFD) options for the 39M, 39L and 39S product line. Factory supplied VFDs are programmed and started up from the factory and qualify the VFD, through ABB, for a 24-month warranty from date of commissioning or 30 months from date of sale,

whichever occurs first. In addition, the VFD parameters are programmed into the controller and removable keypad. In the event that the VFD fails and needs replacement, the program can then be uploaded to the replacement VFD via the original keypad.
