Split System Heat Pump Outdoor Unit

6 to 20 Nominal Tons

38AXQ07-25 60 Hz Heat Pump Outdoor Unit Split
System with Puron Advance™ (R-454B) Refrigerant

Introducing Carrier's new Gemini™ heat pump condensing units with Puron Advance™ — offering maximum flexibility for even the most demanding jobs.

Major design features of 38AXQ heat pump condensing units include:

- Puron Advance (R-454B) refrigerant, which delivers a 75% reduction in global warming potential (GWP) compared to the original Puron. Puron Advance's GWP of 466 easily exceeds the EPA (Environmental Protection Agency) requirement of <700 GWP
- Single circuit, two-stage, and dual circuit, three-stage designs for maximum performance and flexibility in new construction and replacement situations
- Economical cooling designs with a rugged, dependable build
- Cooling capability up to 125°F (52°C) ambient and down to 35°F (2°C) ambient standard

Installation flexibility

Carrier knows that split system installations are never easy. For that reason 38AXQ units were designed with application flexibility in mind. With a variety of offerings in single circuit, two-stage models (two pipe) and dual circuit, three-stage models (4 pipe), our heat pump condensing units can handle a variety of site design requirements. With piping guidelines similar to legacy R-410A and R-22 systems, replacements are easier than ever. All dissipation equipment is pre-installed in the 40RLQ heat pump fan coil and works seamlessly with the 38AXQ condensing unit through standard thermostat connections.

38AXQ products can be mounted on grade, on rails, or on a roof, and can accommodate air handlers installed above or below the condensing unit. That flexibility is perfect for decorative buildings like churches with pitched roofs where rooftop cooling equipment may not be practical or buildings that were originally designed without air conditioning.

Now, rather than mount an entire curb, all you need is a location to mount a fan coil and a few small holes for piping to pass through to keep occupants comfortable all year round. For complete product information and installation requirements, please consult the rest of this document and installation manuals.

Efficient operation

Our heat pump condensing units are tested and designed with our matched 40RLQ heat pump air handlers. This ensures reliable operation by minimizing issues with piping design and oil return. All systems are tested in accordance with AHRI standard 340/360 and offer IEERs up to 15.3. Increased IEER values help reduce overall operating cost and energy consumption.

Factory-installed options (FIOPs)

Pre-engineered and certified factory-installed options (FIOPs) minimize installation time at site, reducing installation cost.

FIOPs include:

- Low ambient controls which provide cooling operation down to -20°F (-29°C) ambient temperatures
- Non-fused disconnect
- Special coil coating protection
- Louvered hail guards

For situations where time is critical Carrier also offers a full line of field

installed accessories to upgrade stocked equipment at site to meet customer needs.

Constructed for a long life

The 38AXQ heat pump condensing units are designed and built to last. Featuring our new Puron Advance™ R-454B refrigerant, our split systems can be customized to suit a variety of building designs. Where conditions require, special coil coatings and coil protection are available and cabinets are constructed of pre-painted galvanized steel, delivering unparalleled protection from the environment to ensure long life, good looks, and reliable operation. Onboard Comfort Alert™¹ diagnostic controls are included standard to enhance system protection and reliability. When there is an issue, valuable diagnostic information is easily readable to get equipment back up and running fast.

Controls for performance dependability

The 38AXQ heat pump condensing units offer operating controls and components designed for dependable performance. The high efficiency hermetic scroll compressors are engineered for long life and durability and include vibration isolation for quiet operation. High-pressure switches protect the entire refrigeration system from abnormally high operating pressures and a low-pressure switch protects the system from loss of charge. These units also include anti-short-cycling protection, which helps to guard the units against compressor failure. All units include a crankcase heater to eliminate liquid slugging at start-up. Each unit comes standard with the Comfort Alert control system which provides:

- System Go LED indicator
- Fault LED indicator
- Compressor fault LED indicator
- Phase loss protection
- Phase reversal protection
- Safety pressure indicator
- Anti-short cycle protection

Innovative Carrier 40RLQ packaged heat pump air handlers are custom matched to 38AXQ condensing units. The 40RLQ Series has excellent fan performance, efficient heat pump coils, a unique combination of indoor-air quality features, and easy installation. Its versatility and state-of-the-art features help to ensure economical performance of the split system both

Heat pump flexibility

38AXQ heat pump models offer onboard electromechanical heating standard. Our systems are tested for reliable reverse cycle heating operation. The result is a clean, environmentally responsible electric heat source to keep occupants comfortable year-round. All 38AXQ models can be easily controlled with a standard thermostat and remove the need to burn fossil fuels to heat your building. Should you need supplemental heat, we offer a full line of single point powered electric heaters for 40RLQ heat pump air handlers that can easily be installed at site.

Puron Advance™ features

In 2018, Carrier announced Puron Advance (R-454B) as our next generation refrigerant for light commercial products. With a GWP of 466 and similar working pressure and performance to R-410A, Puron Advance easily

exceeds the EPA's new, stringent <700 GWP refrigerant requirement while minimizing unit redesign. Like other next generation refrigerants (R-32, etc.), R-454B is classified as an "A2L" refrigerant by ASHRAE (American Society of Heating, Refrigerating, and Air-Conditioning Engineers). This designation means that R-454B is "mildly flammable" under certain conditions. While this is a change from legacy "A1 — No Flame Propagation" refrigerants like Puron (R-410A), A2Ls are still very low on the flammability scale and quite safe for use. A2L refrigerants are difficult to ignite and have an extremely low flame speed — much less so than natural gas, propane, or even rubbing alcohol. At Carrier, we are committed to safety. As such, all of our Puron Advance systems include a factory installed dissipation control board and leak sensor designed to last the lifetime of the unit. This system is certified to UL 60335-2-40 and designed to work right away, without any field configuration or wiring. In the event of

a leak, these systems automatically identify and resolve the issue by safely dissipating the refrigerant to minimize risk to equipment, buildings, or occupants.

Economy and rugged dependability

The 38AXQ heat pump condensing units and 40RLQ heat pump air handlers have low initial cost and energy-efficient operation to continue to save building owners money. With code compliant two or three stage operation, and mechanically bonded coil fins to improve heat transfer, Carrier's split systems help ensure occupants are comfortable with minimal energy spend. Our die-formed galvanized steel panels help ensure structural integrity under all operating conditions for a long operating life. With large control boxes and readily accessible components, 38AXQ units are designed for maintenance. In the event a full replacement is necessary, units can often be found in inventory.

NOTE(S):

- A continuous rise of 0-10ft; no riser required.
A continuous rise of 11-30ft; speed riser required.
A continuous rise of 31-75ft; double riser required.
A continuous rise of more than 75ft is not recommended.
- For Speed Riser:
Tube S is the horizontal line size.
Tube A is the reduced diameter riser size.
See installation manual for further details.
- For Double Suction Riser:
Tube S is the horizontal line size.
Tube A is the reduced diameter riser size without bottom trap.
Tube B is the parallel riser size with bottom oil trap.
See installation manual for further details.

Carrier

THIS DOCUMENT IS THE PROPERTY OF Carrier Corporation and is loaned to you for your use only. It and its contents shall not be disclosed or used without Carrier Corporation's written consent.

NOTES:

1. MINIMUM CLEARANCE (LOCAL CODES OR JURISDICTION MAY PREVAIL) TO COMBUSTIBLE SURFACES: 0 INCHES.
2. OUTDOOR COIL: FOR PROPER AIR FLOW: 36 INCHES GREATER CLEARANCE IS OPTIONAL.
3. OUTDOOR COIL: 60 INCHES TO ASSURE PROPER OUTDOOR FAN OPERATION.
4. BETWEEN UNITS: CONTROL BOX SIDE, 42 INCHES PER NEC.
5. SIDE: 36 INCHES PER NEC.
6. CONCRETE WALLS AND OTHER GROUNDED SURFACES: CONTROL BOX SIDE, 42 INCHES PER NEC.
7. WITH EXCEPTION OF THE CLEARANCE FOR THE OUTDOOR COIL AS STATED IN NOTE 1B, A REMOVABLE FENCE OR BARRICADE REQUIRES NO CLEARANCE.
8. ALL UNITS MUST BE INSTALLED ON LEVEL FLOORS MADE FROM WOOD OR CLASS "A, B OR C ROOF COVERING MATERIAL.

38AXQ, 40RLQ options and accessories

38AXQ

38AXQ ITEMS	OPTION ^a	ACCESSORY ^b
Convenience Outlet (115-v) Powered	X	
Convenience Outlet Non-powered	X	
Outdoor Coil Coatings	X	
Louvered Hail Guard	X	X
Low Ambient Temperature Control	X	X
Non-Fused Disconnect Switch ^c	X	
Programmable Thermostats		X

NOTE(S):

- a. Factory-installed option.
- b. Field-installed accessory.
- c. Not available when unit MOCP electrical rating exceeds 80 amps.

Factory-installed options

115-v convenience outlet (powered, non-powered)

A powered convenience outlet is available to provide power to electric drills, lights, and refrigerant recovery machines. This means that a separate 115-v power supply is no longer required.

Non-powered convenience outlet requires the field installation of a general purpose 125-volt 15-A circuit powered from a source elsewhere in the building.

Outdoor coil coatings

Outdoor coil coating options are available to match coil protection to site conditions for optimum durability. Refer to the Outdoor Coil Coating Applications table below for selection guidance. Consult a Carrier representative for further information.

Outdoor Coil Coating Applications

DESCRIPTION	ENVIRONMENT					
	STANDARD NON-CORROSIVE	MILD COASTAL	MODERATE COASTAL	SEVERE COASTAL	INDUSTRIAL	COMBINED COASTAL AND INDUSTRIAL
Alum Fin / Cu Tube	X					
Pre-Coated Al / Cu		X				
E-Coated Al / Cu		X	X	X	X	X
Cu / Cu			X	X		

Outdoor coil louvered hail guard

The outdoor coil louvered hail guard protects outdoor units from hail and other flying debris.

Low ambient temperature head pressure control

The head pressure control operates in Cooling mode at outdoor temperatures below 35°F (2°C). The low ambient control varies the speed of outdoor-fan motors to maintain correct condensing temperature down to -20°F (-29°C).

Non-fused disconnect switch

The non-fused disconnect switch removes power locally at the condensing unit. This switch also includes a power lockout capability to protect the service person. This lock-out switch saves time and effort as the service person no longer needs to access a distant disconnect switch while servicing the unit.

Field-installed accessories

Outdoor coil louvered hail guard

The outdoor coil louvered hail guard protects outdoor units from hail and other flying debris.

Low ambient temperature head pressure control

The head pressure control operates in Cooling mode at outdoor temperatures below 35°F (2°C). The low ambient control varies the speed of outdoor-fan motors to maintain correct condensing temperature down to -20°F (-29°C).

Carrier commercial thermostats

Our commercial thermostats provide 7-day programmable capability for commercial applications.

40RLQ

40RLQ ITEMS	OPTION ^a	ACCESSORY ^b
Alternate Fan Motors	X	
Alternate Drive	X	
CO ₂ Sensors		X
Condensate Drain Trap		X
Discharge Duct Adapter (40RLQ 07-12 only)		X
Discharge Plenum		X
Economizer		X
Electric Heater		X
Hot Water Heating Coils		X
Optional Display Kit for Staged Air Volume (SAV) with VFD (40RLQ 16-25 only)		X
Overhead Suspension Package		X
Pre-Painted Units	X	
Programmable Thermostats		X
Return Air Grille		X
Steam Heating Coil (1 row)		X

NOTE(S):

- a. Factory-installed option.
- b. Field-installed accessory.

Factory-installed options

Alternate fan motors and drives

Alternate fan motors and drives are available to provide the widest possible range of performance.

Pre-painted steel units

Pre-painted steel units are available from the factory for applications that require painted units. Units are painted with American Sterling Gray color.

Field-installed accessories

Optional VFD display kit (40RLQ16-25 only)

There is an optional VFD display kit offered (as an accessory) to allow the user to troubleshoot any VFD faults in the field after startup.

NOTE: Do not use the VFD display kit to adjust the frequency and voltage in the VFD to required performance requirements. This could lead to decreased life of the motor and VFD.

CO₂ sensors

CO₂ sensors can be used in conjunction with the economizer accessory to help meet indoor air quality requirements. The sensor signals the economizer to open when the CO₂ level in the space exceeds the set point. A Carrier Comfort System programmable thermostat can be used to override the sensor if the outside-air temperature is too high or too low.

Condensate drain trap

The condensate drain trap includes an overflow shutoff switch that can be wired to turn off the unit if the trap becomes plugged. Kit also includes a wire harness that can be connected to an alarm if desired. The transparent trap is designed for easy service and maintenance.

Discharge plenum

The discharge plenum directs the air discharge directly into the occupied space; integral horizontal and vertical louvers enable redirection of airflow. This accessory is available unpainted or painted. Field assembly is required (only applicable for vertical application).

Economizer (enthalpy controlled)

The enthalpy controlled Economizer provides ventilation air and “free” cooling if outside ambient temperature and humidity are suitable. It can also be used with CO₂ sensors to help meet indoor air quality requirements.

Electric heater

Electric heaters are available as factory-supplied and field-installed accessories for nominal 240v, 480v, and 575v, 3-phase, 60 Hz units. Electric heaters are UL and CSA agency-approved. They have single-point power wiring. The heater assembly includes contactors with 24-v coils, power wiring, 24- v control wiring terminal blocks, and a hinged access panel. Electric heaters should not be used with an air discharge plenum.

Two-row hot water coils

Two-row hot water coils have copper tubes mechanically bonded to aluminum plate fins and non-ferrous headers.

Overhead suspension package

The overhead suspension package includes necessary brackets to support units in horizontal ceiling installations.

Return-air grille

The return-air grille provides a protective barrier over the return-air opening and gives a finished appearance to units installed in the occupied space. This accessory is available unpainted or painted.

One-row steam coil

The one-row steam coil has copper tubes and aluminum fins. The Inner Distributing Tube (IDT) design provides uniform temperatures across the coil face. The steam coil has a broad operating pressure range; up to 20 psi (138 kPag) at 260°F (126°C). The IDT steam coils are especially suited to applications where sub-freezing air enters the unit.

Discharge duct adapter (Sizes 07-12)

This accessory is required for replacements using 40RLQ units with or without electric heat. It is not required for new installations for when using steam coil, hot water coil, or discharge plenum accessories.

Horizontal Installation

LEGEND

NEC — National Electrical Code
TXV — Thermostatic Expansion Valve

NOTE(S):

1. Field-supplied.
2. Double riser may be required. Consult condensing unit product data catalog for details.
3. All piping must follow standard refrigerant piping techniques. Refer to Carrier System Design Manual for details.
4. All wiring must comply with the applicable local and national codes.
5. Wiring and piping shown are general points-of-connection guides only and are not intended for, or to include all details for, a specific installation.
6. Liquid line solenoid valve (solenoid drop control) is recommended to prevent refrigerant migration to the compressor.
7. Internal factory-supplied TXVs not shown.

Vertical Installation

LEGEND

DIAM — Diameter
NEC — National Electrical Code
TXV — Thermostatic Expansion Valve

NOTE(S):

1. Field-supplied.
2. All piping must follow standard refrigerant piping techniques. Refer to Carrier System Design Manual for details.
3. All wiring must comply with the applicable local and national codes.
4. Wiring and piping shown are general points-of-connection guides only and are not intended for, or to include all details for, a specific installation.
5. Filter driers must be bi-flow type suited for heat pump duty.
6. Liquid line solenoid valve (solenoid drop control) is recommended to prevent refrigerant migration to the compressor on line links above 75 ft.
7. Internal factory-supplied TXVs and check valves not shown.

NOTE(S):

- In compliance with NEC requirements for multimotor and combination load equipment (refer to NEC Articles 430 and 440), the overcurrent protective device for the unit shall be fuse or HACR breaker. Canadian units may be fuse or circuit breaker.
- Motor RLA and LRA values are established in accordance with Underwriters Laboratories (UL) Standard 60335-2-40.
- The 575-v units are UL, Canada-listed only.
- Unbalanced 3-Phase Supply Voltage: Never operate a motor where a phase imbalance in supply voltage is greater than 2%. Use the formula below to determine the percentage of voltage imbalance.
- The MCA values are calculated in accordance with NEC Article 440.
- The 575-v units are UL, Canada-listed only.

$$\% \text{ Voltage Imbalance} = 100 \times \frac{\text{max voltage deviation from average voltage}}{\text{average voltage}}$$

Example: Supply voltage is 230-3-60

AB = 224-v
BC = 231-v
AC = 226-v

$$\text{Average Voltage} = \frac{(224 + 231 + 226)}{3} = \frac{681}{3} = 227$$

Determine maximum deviation from average voltage.

(AB) 227-224 = 3-v

(BC) 231-227 = 4-v

(AC) 227-226 = 1-v

Maximum deviation is 4-v.

Determine percent of voltage imbalance.

$$\% \text{ Voltage Imbalance} = 100 \times \frac{4}{227} = 1.76\%$$

This amount of phase imbalance is satisfactory as it is below the maximum allowable 2%.

IMPORTANT: If the supply voltage phase imbalance is more than 2%, contact your local electric utility company immediately.

Refrigerant line sizing

Consider the length of the piping required between the outdoor and indoor units. The maximum allowable line length is 100 ft (30.5 m). See pages 7-9 for Piping Recommendation tables. Refrigerant vapor piping should be insulated.

IMPORTANT: A refrigerant receiver is not provided with the unit. Do not install a receiver.

Install filter drier(s) and moisture indicator(s)

Every unit **MUST** have a bi-directional filter drier in the liquid line. Locate the filter drier at the indoor unit, close to the evaporator coil thermal expansion valve (TXV) inlets.

38AXQ units include one (two on 16 and 25 size models) Puron-duty filter drier, shipped in cartons attached to the unit base pan. Remove the filter drier and prepare to install in the liquid line at the evaporator coil. Do not remove connection fitting plugs until ready to connect and braze the filter drier into the liquid line position.

Installation of liquid line moisture indicating sight glass in each circuit is recommended. Locate the sight glass(es) between the outlet of the filter drier and the TXV inlet.

Refer to Refrigerant Specialties Part Numbers Table for recommendations on refrigeration specialties.

Select the filter drier for maximum unit capacity and minimum pressure drop. Complete the refrigerant piping from the indoor unit to the outdoor unit before opening the liquid and suction lines at the outdoor unit.

Install liquid line solenoid valve

It is recommended that a bi-directional solenoid valve be placed in the main liquid line between the outdoor unit and the indoor coil. Locate the solenoid valve at the end of the liquid line, near the outdoor unit connections, with flow direction arrow pointed at the outdoor unit. Refer to Refrigerant Specialties Part Numbers Table below. (A liquid line solenoid valve is required when the liquid line length exceeds 75 ft [23 m].)

This valve prevents refrigerant migration (which causes oil dilution) to the compressor during the off cycle, at low outdoor ambient temperatures. Wire the solenoid according to the unit label diagram.

Location of Sight Glass(es) and Filter Driers (typical 38AXQ / 40RLQ size 07 and 08 system)

Location of Sight Glass(es) and Filter Driers (typical 38AXQ / 40RLQ size 12 system)

Split System Heat Pump Outdoor Unit with Puron Advance™ Refrigerant HVAC Guide Specifications - Section 15678

Size Range: **6 to 20 Nominal Tons Cooling**

Carrier Model Numbers: **38AXQ07-25**

Part 1 — General

1.01 SYSTEM DESCRIPTION

- A. Outdoor-mounted, electrically controlled, air-cooled split system heat pump suitable for on-the-ground or rooftop installation. Unit shall consist of a scroll air-conditioning compressor assembly, an air-cooled coil, propeller-type condenser fans, and a control box. Unit shall discharge supply air upward as shown on contract drawings. Unit shall function as the outdoor component of an air to air electric heat pump system.
- B. Unit must be designed with a Puron Advance™ (R-454B) refrigerant circuit to match Packaged Heat Pump Air Handling Unit(s), 40RLQ for matched systems approved by the manufacturer.

1.02 QUALITY ASSURANCE

- A. Unit shall be rated in accordance with AHRI Standard 340/360.
- B. Unit construction shall comply with ANSI/ASHRAE 15 safety code latest revision and comply with NEC.
- C. Unit shall be constructed in accordance with UL 60335-1 and 60335-2-40 standard and shall carry the UL and UL, Canada label.
- D. Unit cabinet shall be capable of withstanding 500-hour salt spray exposure per ASTM B117 (scribed specimen).
- E. Air-cooled outdoor coils shall be leak tested at 150 psig and pressure tested at 650 psig and qualified to UL burst test at 1980 psig.
- F. Unit shall be manufactured in a facility registered to ISO 9001 manufacturing quality standard.

1.03 DELIVERY, STORAGE AND HANDLING

Unit shall be shipped as single package only, and shall be stored and handled according to unit manufacturer's recommendations.

1.04 WARRANTY (FOR INCLUSION BY SPECIFYING ENGINEER)

Part 2 — Products

2.01 EQUIPMENT

- A. General: Factory-assembled, single piece, air-cooled split system heat pump. Contained within the unit enclosure shall be all factory wiring, piping, controls, compressor, holding charge Puron Advance™ (R-454B), and special features required prior to field start-up.

B. Unit Cabinet:

- 1. Unit cabinet shall be constructed of galvanized steel, bonderized and coated with a pre-painted baked enamel finish.
- 2. A heavy-gauge roll-formed perimeter base rail with forklift slots and lifting holes shall be provided to facilitate rigging.

C. Fans:

- 1. Condenser fans shall be direct driven, propeller type, discharging air vertically upward.
- 2. Fan blades shall be balanced.
- 3. Condenser fan discharge openings shall be equipped with PVC coated steel wire safety guards.
- 4. Condenser fan and motor shaft shall be corrosion resistant.

D. Compressor:

- 1. Compressor shall be of the hermetic scroll type.
- 2. Compressor shall be mounted on rubber grommets.
- 3. Compressor shall include overload protection.
- 4. Compressors shall be equipped with a crank-case heater.
- 5. Compressor shall be equipped with internal high discharge temperature protection.

E. Coil:

- 1. Coil shall be air-cooled and circuited for sub cooling during cooling mode of operation.
- 2. Coil shall be constructed of aluminum fins (copper fins optional) mechanically bonded to internally grooved seamless copper tubes which are then cleaned, dehydrated, and sealed.

F. Refrigeration Components and Operation:

- 1. Refrigeration circuit components shall include liquid line service valve, suction line service valve, a full charge of compressor oil, holding charge of refrigerant, and loose shipped refrigerant filter drier (one per circuit).
- 2. Precision-sized suction line accumulator on each refrigerant circuit shall protect from oil being removed from the scroll compressor rotating orbiter and plate during the activation of the defrost mode and switching back and forth from cooling and heating operations.
- 3. Unit shall be capable of starting and running up to 125°F (52°C) and down to 35°F (2°C) ambient outdoor temperature.
- 4. Unit shall operate at $\pm 10\%$ from rated voltage

G. Controls and Safeties:

1. Minimum control functions shall include:
 - a. Control wire terminal blocks.
 - b. Compressor lockout on auto-reset safety until reset from thermostat.
 - c. Each unit shall utilize the Comfort Alert™¹ Diagnostic Board that provides:
 - 1) System Pressure Trip fault code indication
 - 2) Short Cycling fault code indication
 - 3) Locked Rotor fault code indication
 - 4) Open Circuit fault code indication
 - 5) Reverse Phase 3 fault code indication
 - 6) Welded Contactor fault code indication
 - 7) Low Voltage fault code indication
 - 8) Anti-short cycle protection
 - 9) Phase reversal protection
2. Minimum safety devices which are equipped with automatic reset (after resetting first at thermostat), shall include:
 - a. High discharge pressure protection switch.
 - b. Loss-of-charge protection switch.

H. Electrical Requirements:

1. Unit electrical power shall be single-point connection.
2. Unit control circuit shall contain a 75VA - 24-v transformer for unit control.

I. Special Features:

1. Unit-Mounted, Non-Fused Disconnect Switch: (Not available when unit MOCP electrical rating exceeds 80 amps)
Switch shall be factory-installed and internally mounted. NEC and UL-approved non-fused switch shall provide unit power shutoff. Switch shall be accessible from outside the unit and shall provide power off lock-out capability.
2. Convenience Outlet:
 - a. Powered convenience outlet.
 - 1) Outlet shall be powered from main line power to the rooftop unit.
 - 2) Outlet shall be powered from line side or load side of disconnect by installing contractor, as required by code. If outlet is powered from load side of disconnect, unit electrical ratings shall be UL certified and rated for additional outlet amperage.
 - 3) Outlet shall be factory-installed and internally mounted with easily accessible 115-v female receptacle.
 - 4) Outlet shall include 15 amp GFI receptacles with independent fuse protection.

- 5) Voltage required to operate convenience outlet shall be provided by a factory-installed step-down transformer.
- 6) Outlet shall be accessible from outside the unit.
- 7) Outlet shall include a field-installed "Wet in Use" cover.

b. Non-Powered convenience outlet.

- 1) Outlet shall be powered from a separate 115/120v power source.
- 2) A transformer shall not be included.
- 3) Outlet shall be factory-installed and internally mounted with easily accessible 115-v female receptacle.
- 4) Outlet shall include 15 amp GFI receptacles with independent fuse protection.
- 5) Outlet shall be accessible from outside the unit.
- 6) Outlet shall include a field-installed "Wet in Use" cover.

3. Low-Ambient Temperature Control:

A low-ambient temperature control shall be available as a factory-installed option or as a field-installed accessory. This low-ambient control shall regulate speed of the condenser-fan motors in response to the saturated condensing temperature of the unit. The control shall maintain correct condensing pressure at outdoor temperatures down to -20°F (-29°C).

4. Optional Outdoor Coil Materials:

a. Pre-Coated Aluminum-Fin Coils:

Coils shall have a durable epoxy-phenolic coating to provide protection in mildly corrosive coastal environments. Coating shall be applied to the aluminum fin stock prior to the fin stamping process to create an inert barrier between the aluminum fin and copper tube. Epoxy-phenolic barrier shall minimize galvanic action between dissimilar metals.

b. E-Coated Aluminum-Fin Coils:

Coils shall have a flexible epoxy polymer coating uniformly applied to all coil surface areas without material bridging between fins. Coating process shall ensure complete coil encapsulation. Color shall be high gloss black with gloss requirements of 60° of 65 to 90% per ASTM D523-89. Uniform dry film thickness from 0.8 to 1.2 mil on all surface areas including fin edges. Superior hardness characteristics of 2H per ASTM D3363-92A and cross hatch adhesion of 4B-5B per ASTM D3359-93. Impact resistance shall be up to 160 in./lb (ASTM D2794-93). Humidity and water immersion resistance shall be up to a minimum of 1000 and 250 hours respectively

1. Third-party trademarks and logos are the property of their respective owners.

(ASTM D2247-92 and ASTM D870-92). Corrosion durability shall be confirmed through testing to no less than 1000 hours salt spray per ASTM B117-90. Coil construction shall be aluminum fins mechanically bonded to copper tubes.

5. Thermostat Controls:

- a. Programmable multi-stage thermostat with 7-day clock, holiday scheduling, large backlit

display, remote sensor capability, and Title 24 compliance.

- b. Commercial electronic thermostat with 7-day time clock, auto-changeover, multistage capability, and large LCD temperature display.
6. Louvered Hail Guard Package:
- Louvered hail guard package shall protect coils against damage from hail and other flying debris.
