

Carrier Zoning Systems

Take control of your comfort by conditioning only those rooms that are in use

Zoning is simply a way of dividing a home into areas with similar cooling and heating needs. You wouldn't have just one light switch for your entire home. With zoning, you can have the same flexibility with your temperature as you do with your lighting, by independently controlling different areas of your home according to their needs and occupancy. The benefits of a Carrier zoning system include:

- Temperature and humidity level optimized in each zone
- Increased energy savings and energy efficiency
- Eliminate hot and cold spots

Carrier offers two zoning systems to fit your lifestyle and comfort needs

INFINITY® ZONING SYSTEM*

Our most intelligent system allows control of the temperature and humidity in up to eight areas in the home. Add optional smart sensors to easily monitor and control each zone.

PERFORMANCE™ SERIES FOUR-ZONE SYSTEM*

Experience targeted home comfort control and enhanced energy efficiency in up to four zones in your home.

To learn more about Carrier zoning systems and see if one is right for you visit, carrier.com/residential.

* Requires the purchase of separate zoning components.
