# Installation Instructions

**NOTE:** Read the entire instruction manual before starting the installation.

## SAFETY CONSIDERATIONS

Installation and servicing of this equipment can be hazardous due to mechanical and electrical components. Only trained and qualified personnel should install, repair, or service this equipment.

Untrained personnel can perform basic maintenance functions such as cleaning and replacing air filters. All other operations must be performed by trained service personnel. When working on this equipment, observe precautions in the literature, on tags, and on labels attached to or shipped with the unit and other safety precautions that may apply.

Follow all safety codes. Installation must be in compliance with local and national building codes. Wear safety glasses, protective clothing, and work gloves. Have fire extinguisher available. Read these instructions thoroughly and follow all warnings or cautions included in literature and attached to the unit. In Canada, refer to current editions of the Canadian electrical code CSA 22.1 and current editions of the National Electrical Code (NEC) NFPA 70.

Recognize safety information. This is the safety-alert symbol . When you see this symbol on the unit and in instructions or manuals, be alert to the potential for personal injury. Understand these signal words; DANGER, WARNING, and CAUTION. These words are used with the safety-alert symbol. DANGER identifies the most serious hazards which **will** result in severe personal injury or death. WARNING signifies hazards which **could** result in personal injury or death. CAUTION is used to identify unsafe practices which **may** result in minor personal injury or product and property damage. NOTE is used to highlight suggestions which **will** result in enhanced installation, reliability, or operation.

Follow all safety codes. Wear safety glasses and work gloves. Have a fire extinguisher available.

## WARNING

### ELECTRICAL SHOCK HAZARD

Failure to follow this warning could cause personal injury or death.

Before performing service or maintenance operations on unit, turn off main power switch to unit and install lockout tag. Ensure electrical service to rooftop unit agrees with voltage and amperage listed on the unit rating plate.

## INTRODUCTION

These instructions cover the installation of the Motormaster II Controller head pressure control device. Refer to the Installation section for directions. Louvered panels are required for this installation; see Item 9 in the Installation section of this document and Tables 1 and 2 for more information.

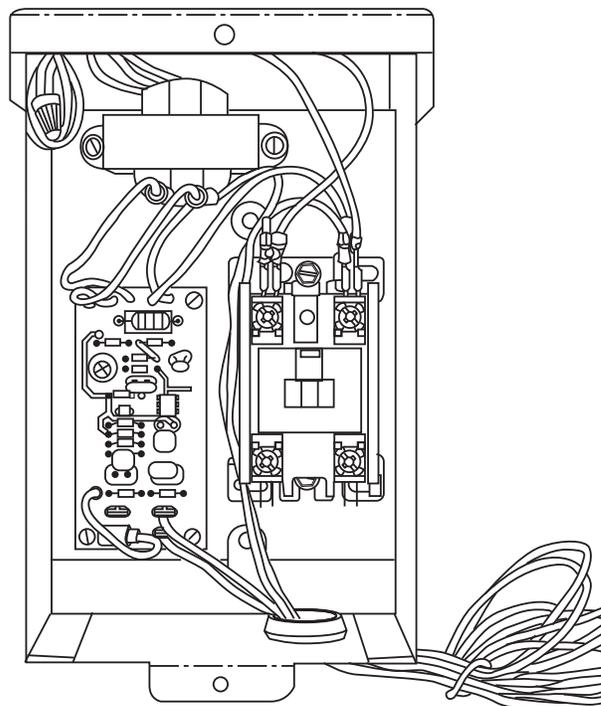

**Table 1 – Add Louvered Panels to These Units if available. If Louvered Panel kit is not available for a specific model, Field Fabricated Wind Baffles are recommended.**

Sensor Connection Details

A11106

**Fig. 3 - Connection Details**

**DESCRIPTION AND USAGE**

The Motormaster II head pressure controller is a cycle control device activated by a temperature sensor mounted on a header tube of the outdoor coil (see Fig. 1). It is designed to cycle the outdoor-fan motors to maintain the saturated condensing temperature within normal operating limits of approximately 130 to 110°F high (54°C to 43°C), 70 to 50°F low (21 to 10°C). The controller maintains working head pressure at low ambient temperatures down to -20°F (-29°C) when properly installed.

**INSTALLATION**

1. Disconnect power to unit. Install lockout tag.
2. Remove unit electrical, blower and compressor access panel. (See Fig. 2.)

3. Disconnect black lead from the outdoor-fan motor (OFM) and connect to Motormaster control (See Wiring Schematic, Fig. 7 or 8).
4. Using a knockout punch and die combination, make hole in the access panel to feed MotormasterII Control wire leads to the side of its mounting location (See Fig. 2 and Fig. 4 or Fig. 5).

**NOTE:** Field-supplied conduit must be used between controller and access panel (or wire into unit entrance). Created hole on the access panel must be sealed to comply with National Electric Code (NEC).

5. Mount Motormaster II Controller on unit. Refer to Fig. 2 and Fig. 4 or Fig. 5, The controller must be mounted vertically with the leads at the bottom. Using the Mounting Template (Fig. 9) as a guide, drill mounting holes. To ensure electrical ground, insert star washers (supplied with the controller) under the heads of mounting screws.
6. Determine sensor location by referring to Fig. 10-41. Route sensor wire through bottom of Motormaster II Controller (Fig. 1) to sensor location specified. Prior to installation, apply conductive grease supplied with accessory to contact surface of sensor.

**⚠ CAUTION**

**COMPONENT DAMAGE HAZARD**

Failure to follow this caution may result in component damage.

Sensor assembly is delicate. Handle with care.

7. Attach sensor to tube as shown in Fig. 3. Installed sensor must be left uninsulated.
8. Power wiring must comply with all local and National Electrical Code (NEC) and International Electric Code (IEC) requirements. Refer to Fig. 7 and 8 for power wiring connections. Coil up all excess wire and secure. (Yellow and blue wires, from controller, must run to unit contactor and connect on the load side.)

**⚠ CAUTION**

**UNIT OPERATION AND COMPONENT DAMAGE HAZARD**

Failure to follow this caution may result in improper unit operation or component damage.

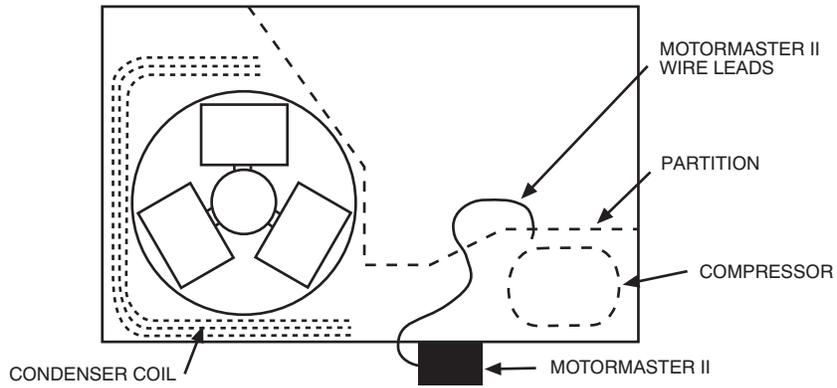

All wires must be secured so that they are not in contact with unit tubing.

9. To prevent wind cross-currents from causing abnormally low condensing temperatures, louvered panels are required on some models. See Table 1 and 2 for models requiring/not requiring louvered panels.
10. Screw back all access panels
11. Reconnect power to the unit.

The Motormaster II head pressure controller is equipped with an alternate operating mode. When this mode is selected, the controller shifts the fan cycle sequence to effectively raise the average condensing temperature approximately 20°F (-6.7°C) higher than the standard operating mode. In this alternate mode, the outdoor fan begins cycling at higher outdoor ambient temperatures. This mode should only be used if the evaporator coil shows signs of frosting at low outdoor ambient temperatures.

To select the alternate operating mode, move the jumper wire on the Motormaster II control board from reset T1 to T2.

Refer to Fig. 6 for thermistor resistance vs. temperature.

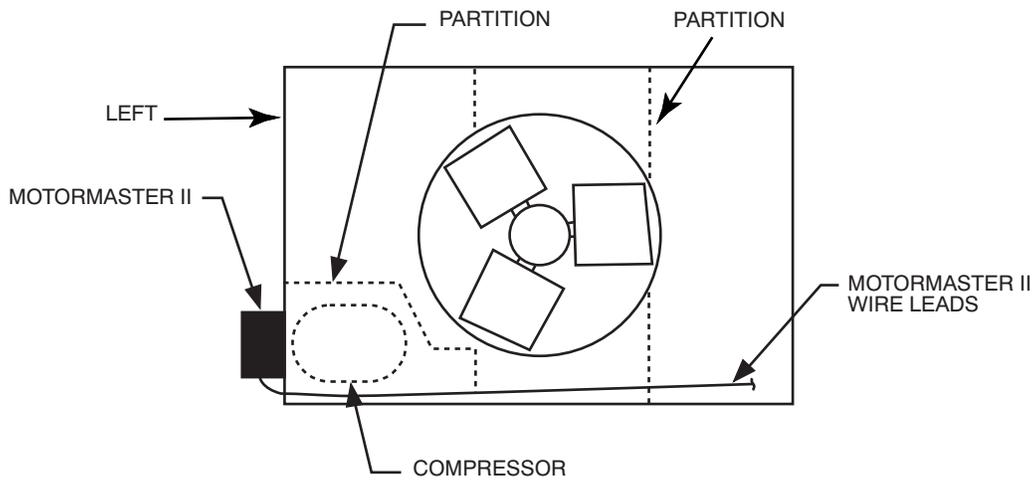

See Step 4 to make hole in access panel.

NOTES:  
1. Motomaster® II transformer is wired for 460-v supply; it must be rewired for 208/230-v application. Be sure to insulate unused tap.  
2. Relay, part no. HN61KB324, is field supplied and normally closed.  
3. CPLOWAMB002A00 transformer only contains a 400-v. supply.
