P/N TSTAT0713K

This device complies with Part 15 of the FCC rules.
Operation is subject to the following two conditions:
(1) This device may not cause harmful interference,
and (2) this device must accept any interference
received, including interference that may cause
undesired operation.

STEP #1

PREPARATION

Proper installation of the TSTAT0713K will be accomplished by following these step by step instructions. If you are unsure about any of these steps, call a qualified technician for assistance.

Assemble tools as shown below.

*Flat Blade
Screwdriver*

*Wire cutter
& Stripper*

*Drill with 3/16
inch Drill Bit
(when not using
j-box)*

Make sure your heater/air conditioner is working properly before beginning installation of the TSTAT0713K.

Carefully unpack the TSTAT0713K. Save the screws, wall anchors, and instructions.

STEP #2

REMOVE OLD THERMOSTAT

Turn off the power to the heating/air conditioning system at the main fuse panel. Most residential systems have a separate breaker for disconnecting power to the furnace.

Remove the cover of the old thermostat. If it does not come off easily check for screws.

Loosen the screws holding the thermostat base or subbase to the wall, and lift away.

Disconnect the wires from the old thermostat. Tape the ends of the wires as you disconnect them, and mark them with the letter of the terminal for easy reconnection to the new thermostat.

Keep the old thermostat for reference purposes, until your new thermostat is functioning properly.

STEP #3

INSTALL BACKPLATE & WIRE

Remove the backplate connector from the rear of the TSTAT0713K and attach it to the wall. Install wires as directed below. When finished, snap TSTAT0713K on to backplate.

If the terminal designations on your old thermostat do not match those on the new TSTAT0713K, **refer to the chart below, or the wiring diagrams that follow.**

Wire from the old thermostat terminal marked	Function	Install on the new TSTAT0713K terminal marked
G or F	Fan	G
Y1, Y or C	Cooling	Y1
W1, W or H	Heating	W1
Rh, R, M, Vr, A	Power	R
C	Common	C
O/B	Rev. Valve	W1,O,B*
W2	2nd Stage Heat	W2
Y2	2nd Stage Cool	Y2
HUM	Humidifier Control	HUM
DEHUM	Dehumidifier Control	DEHUM
L	Comfort Alert	L
RS+5	Remote Sensor +5vdc	RS+5
RS1	Remote Sensor Signal	RS1
RSGND	Remote Sensor Ground	RSGND

* **O** or **b** is used if the system is a Heat Pump.

Calibration

Every TSTAT0713K is calibrated before it leaves the factory. Under normal circumstances there will never be a need to recalibrate the TSTAT0713K again. To accommodate *special needs*, the thermostat may be recalibrated following these steps:

1. While pressing the MODE button, press the FAN button for 5 seconds. After all the icons in the display appear, release the buttons.
2. Press the UP & DOWN buttons at the same time; the display will change.
3. Press the UP & DOWN buttons at the same time again; the current room temperature will be displayed.
4. Use an accurate thermometer to measure room temperature. Press the UP or DOWN buttons until the displayed temperature equals the room temperature.
5. Press the MODE button; the current humidity will be displayed.
6. Use an accurate hygrometer to measure room humidity. Press the UP or DOWN buttons until the displayed humidity equals the room humidity.
7. Press the mode button to return to normal operation.

STEP #4

TEST OPERATION

Turn the power on to the Heating/Air Conditioning system.

Press the *MODE* button repeatedly until the **COOL** icon appears on the display. Press the UP or DOWN buttons until the set temperature is 10 degrees below room temperature. The air conditioner should turn on. **NOTE:** *Most equipment has a time delay of 5 minutes between cool cycles. This feature is defeatable on the thermostat. Consult the Owner's Manual under Setup, cycles per hour.*

Press the *MODE* button repeatedly until the **HEAT** icon appears on the display. Press the UP or DOWN buttons until the set temperature is 10 degrees above room temperature. The heating unit should turn on.

TROUBLESHOOTING

SYMPTOM: The HVAC equipment does not attempt to turn on.

CAUSE: The 5-minute compressor lockout may prevent the air conditioner from turning on, for a period of time.

REMEDY: Consult the Owner's Manual in the Setup section to defeat the cycles per hour and compressor timeguard.

SYMPTOM: The display is blank.

CAUSE: Lack of proper power.

REMEDY: Make sure power is turned on to the furnace and 24vac between **R & W**. If **C** is used, 24vac between **R & C**.
