# WHY ARE SO MANY HOMEOWNERS GOING DUCTLESS?

Because they use the same process as traditional HVAC to heat and cool your home—just without the ductwork. Often called “mini-splits,” these systems work by connecting indoor and outdoor units through flexible refrigerant tubing—so they’re simple to install just about anywhere. And because ductless units are placed directly in the room, they offer precise temperature control, better energy efficiency and cost-effective comfort year-round.

## Consistent Comfort

Our ductless systems use inverter technology to continuously adjust compressor speeds as outside temps change—for quiet operation, consistent temperatures and increased energy savings.

## Reusable Air Filters

KeepRight® ductless units come with built-in reusable filters to effectively capture airborne pollutants and allergens—while saving on home maintenance costs for years to come. Just pull them out, rinse them off and replace.

## Easy Installation

Ductless makes install and maintenance a breeze. Get your system up and running quickly, with fuss-free install in just a few hours. Plus, indoor units connect to the wall with just a small, three-inch hole—so there’s no demo, patching or repainting required.

## Discreet Design

With their sleek design and quiet operation, Performance Series systems blend seamlessly into any space or décor style. They even come with built-in smart features to enhance your comfort, like sleep mode cycles that help you rest easier—and save energy—all night long.

## Smart & Convenient Control

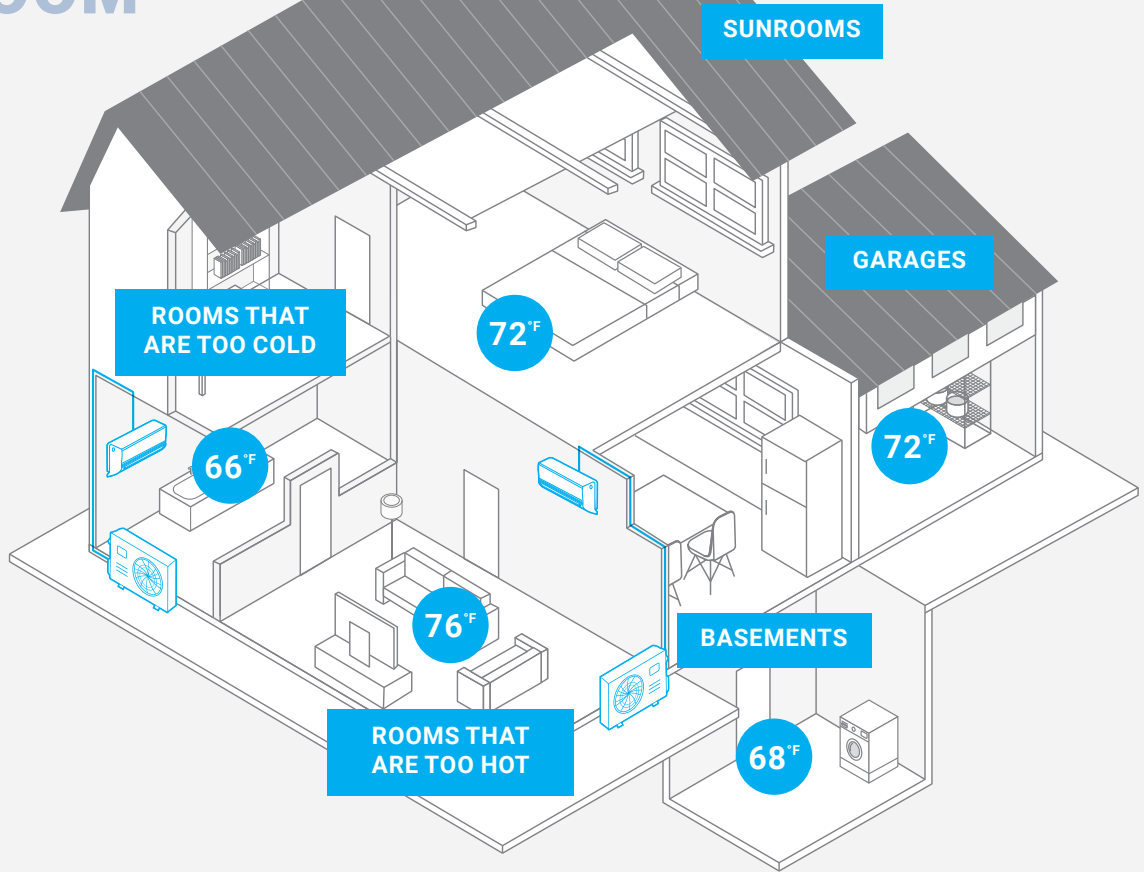

All systems come equipped with wireless, temperature sensing remotes that can automatically adjust output to ensure optimal comfort—whether you’re sitting near a drafty window or curled up by the fire.

## Limited Warranty

To the original owner, our Performance Series heat pumps are covered by a 10-year parts limited warranty upon timely registration.\*
