

Carrier Solar Panels Eligible for FEDERAL TAX CREDIT*

Carrier Transicold's High-Efficiency Solar Charging Systems add critical power to your reefer battery, naturally. You may be able to add critical power to your bottom line with a federal solar investment tax credit (ITC).

Carrier Transicold's solar panel offerings may be eligible for a U.S. federal solar tax credit (ITC). Eligible taxpayers may claim this ITC on their U.S. federal income taxes for 26% of the cost of a qualifying solar photovoltaic system that is placed in service during a covered tax year. The ITC may also apply to parts and labor costs associated with the installation of a qualifying system. There is no maximum credit amount that can be claimed.

This was recently extended by the U.S. government to be available through the 2023 tax year; for tax years beyond 2023 through 2026 there is a reduced ITC range that depends on the year of installation and other factors.

For more information an ITC Fact Sheet, created by the NC Clean Energy Technology Center, is available as a resource on the ITC program.

You can find the document at:

<https://www.seia.org/sites/default/files/2021-01/SEIA-ITC-Factsheet-2021-Jan.pdf>

(Note that this document does not include details of the recent extension of the ITC beyond tax year 2026)

Carrier Transicold Advantages:

- Reefer-Optimized Design
- Hassle-Free Installation
- 5 Year limited warranty

A Sustainable Assist from 93 Million Miles Away.

*Please note that neither this document, nor the Commercial ITC Fact Sheet, is intended to constitute tax or other financial advice or guidance. There are many specific and detailed rules related to the ITC, including but not limited to ownership requirements and recapture rules. As such, it is very important that Carrier Transicold solar panel customers consult with their own tax advisors to determine their particular eligibility for this ITC.
