# Compressed Natural Gas-Powered Supra<sup>®</sup> unit for truck

The Supra<sup>®</sup> CNG unit is a sustainable and efficient solution to support the activities of our customers in urban distribution.

**When advanced sustainable technology is combined with ease of use.**

Designed to use a single fuel source for both the engine on a CNG-powered truck and the refrigeration unit, the Supra<sup>®</sup> CNG unit requires just a single refill point for both, which can help increase operator productivity.

Fitted with an independent tank for the refrigeration unit, it has full autonomy, maintaining cold chain integrity even when the truck is idling or stopped.

## KEY BENEFITS

### A SUSTAINABLE SOLUTION FOR CITY DELIVERY\*

- > Up to **95%** reduction in particulate emissions
- > Up to **20%** reduction in carbon dioxide (CO<sub>2</sub>) emissions\*\*
- > Up to **70%** reduction in nitrogen oxide emissions
- > **Reduction** of noise, vibrations, odors & smokes

SINCE 2017

#### Minimum environmental impact

**CNG** Fuel = Natural gas or biogas\*\*

#### Ease of use

Same fuel for truck & unit

1 single point of refill

#### Performance of temperature control

Full autonomy

100% respect of cold chain

\* As compared to compression ignition diesel engines.  
\*\* Possibility of using biogas made of organic waste.
