Plug in to better control

Explore two powerful ways to enhance your fleet

Take the benefits of your fleet's Micro-Link® 3 (ML3) controllers even further with two powerful add-ons designed to help you save time and reduce costs. The Micro-Link 3 Service Tool (MST) and the Micro-Link 3 USB Adapter (MUA) from Carrier Transicold are easy-to-use products designed to improve the way operators interact with their controllers.

The MUA is designed to function as a pass-through USB device and will stay in the controller after installation. The device will be married to the controller.
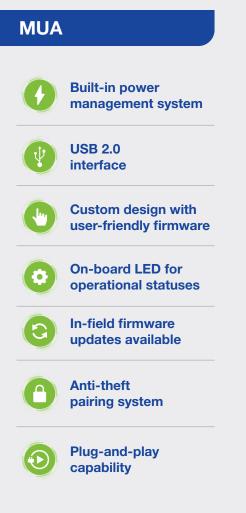

- Eliminates PCMCIA card insertions
- Provides easy operation based on the Carrier SRAM card software
- Allows for a simplified service procedure requiring only a single USB in uploading controller software and downloading data
- Can be installed permanently for greater convenience
- Leaves no software present on the device after usage
- Carrier qualified OEM device and support
- Utilizes the latest operational software

The MST is designed as a USB service tool to maintain and service Carrier units fitted with an ML3 controller. The device is intended to be temporarily inserted into the controller.

- Delivers a cost-efficient alternative to the PCMCIA card using a USB
- Provides easy operation based on the Carrier SRAM card software
- Features a compact design that fits perfectly in the PCMCIA programming port
- Gives users the option to upload operational software or download data
- Uploading of operational software can be completed without USB installed
- Enables future functionality through high-performance on-board core
- Carrier qualified OEM device and support
- Utilizes the latest operational software

Key features

MUA

- **Built-in power management system**
- **USB 2.0 interface**
- **Custom design with user-friendly firmware**
- **On-board LED for operational statuses**
- **In-field firmware updates available**
- **Anti-theft pairing system**
- **Plug-and-play capability**

MST

- **Integrated memory storing operational software**
- **USB 2.0 interface**
- **Custom design with user-friendly firmware**
- **On-board LED for operational statuses**
- **In-field firmware updates available**
- **Support for Carrier Analyzer software**
- **Support for Carrier recovery software**

Your link to greater functionality

Whether you're using the MUA or the MST to stay in control of your units, you can be confident in the quality engineering and reliable support of Carrier Transicold. Both products are designed to improve functionality and make your controllers easier to work with and service.
