TECHLINE

AN EXCHANGE OF TECHNICAL INFORMATION

Number: TL008 - 2022
Subject: ML5 Model Number Configuration   **Released: March 22, 2022**

With the ML5 controller, we have implemented a model number lock feature for model numbers 69NT40-571-113 and -123. Once either of these model numbers are entered within the controller, code select 20 locks and the user is no longer allowed to make any other model number change to the controller.

These models will also only allow specified operational software versions to be loaded to the controller. If an attempt is made to load a non-specified version, a Bad Load message will be displayed.

With this, please ensure that you check the model of the unit which is identified on the unit serial plate prior to entering it into the controller.
