# KEEP YOUR STORE COOL & EFFICIENT

**High-efficiency  
refrigeration cabinets**

**Stylish and inviting  
counters**

**Flexible  
plug-in range**

# Team up with the refrigeration specialists

Celsior is a major supplier of refrigeration products in Europe. The company was founded more than 60 years ago in Germany. It has now expanded to reach customers in all European countries.

The product portfolio, presented in this catalogue, essentially includes:

- Refrigerated and freezer cabinets for use with external refrigeration systems
- Plug-in cabinets and freezers
- Counters

By teaming up with Celsior, you select the quality and design from Carrier Commercial Refrigeration, our parent company.

- **Quality products:** a comprehensive range of products, including all types of cabinets, designed and produced in Europe
- **Performance solutions:** adapted to all store formats and configurations, considering sustainability and energy efficiency
- **Sustainable partners:** all our products are available with natural refrigerant (R290 and CO<sub>2</sub>) to ensure long-lasting installations whatever the regulation

Our catalogue has one main objective: to support you in your decision making in order to best meet your needs. All Celsior teams remain at your disposal for your future projects.

## Celsior teams support you in your project

Present in 27 countries in Europe,  
go on our website to find out your  
local partner.

# Thinking about the future

## Our commitment to sustainable development

Sustainable development is at the heart of Celsior's concerns. As such, Celsior continues to improve the environmental performance of its products, services and industrial operations, but has also implemented a sustainable development policy aimed at protecting our natural environment. All new products developed by Celsior must meet our desire to protect the environment.

## Energy consumption

### Efficiency & energy saving

The high efficiency of Celsior products will allow you to reduce your energy consumption and optimize your maintenance costs. Plus, technologies are integrated to reduce energy consumption (EC motors, frequency drive on compressors, floating condensing pressure, heat recovery using heat pump, Specific algorithm to optimize controls).

With each of our innovations, we will strive to optimize the resources used to preserve natural resources for future generations.

In short, at Celsior, we will continue to do what we have always done: put the environment at the center of our concerns, highlight innovation and think about the future.

### Control and regulation

Celsior also offers you a wide range of regulatory solutions to combine energy efficiency and intelligence of the management of consumption.

### Innovative products oriented to energy savings

Celsior is dedicated to partnering with customers to help reduce operating costs and environmental impact despite spiraling energy prices, increasing energy consumption through longer store opening hours and constant expansion of the range of goods to be refrigerated. To tackle these challenges, Celsior offers innovative solutions like the CO<sub>2</sub>OLtec® Evo system, which uses the natural refrigerant CO<sub>2</sub> to help customers reduce energy costs by up to 30% compared to standard transcritical system.

All 60 bar CO<sub>2</sub> evaporators now operate with 90 bar expansion valve & liquid line for extended operation flexibility.

## F-Gas

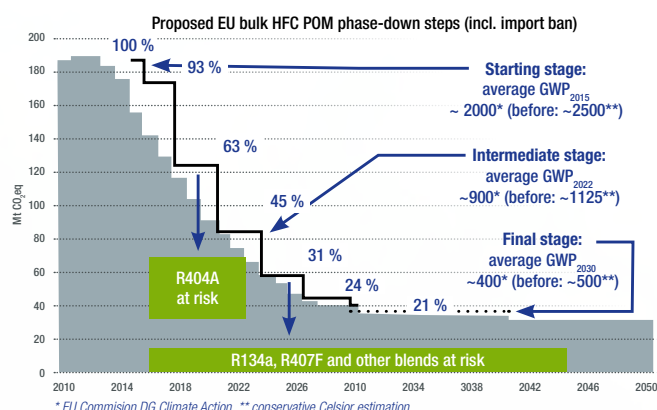

The new F-Gas regulation EU/517/2014 entered into force on the 9th June 2014 and has become effective in January 2015. From this time, a «cap and phase-down» mechanism will gradually reduce the availability of new fluorinated greenhouse gases (F-Gases); and in particular hydrofluorocarbons (HFCs), in the 28 European Union (EU) countries. Figure below shows the timeline and the individual reduction steps of this phase-down, which will result in a 79% reduction of HFC supplies by the year 2030.

For the first time, the new regulation imposes restrictions on the volume of HFCs that can be produced and imported. The restrictions relate to the total placement of bulk HFCs (in tones of CO<sub>2</sub> equivalent) on the market, and will primarily affect

those substances that have the highest global warming impact based on their direct emission potentials. As a result, there will be a move away from HFCs that have a medium-to-high Global Warming Potential (GWP). It is expected that decreased availability will quickly lead to significant price increases for higher-GWP HFCs.

In addition to the phase-down, the regulation will place restrictions and bans on the use of HFCs in certain application, which will effectively mean the phase-out of high GWP HFC refrigerants such as R404A and R507. With some minor exceptions, elements of the previous F-Gas regulation (EC/842/2006) such as record keeping, leak tests and certification of companies and personnel remain mostly unchanged.

## Reduction of HFC Supply (Annex V)

Refrigerant	GWP
R404A	3922
R407A	2107
R407F	1825
R448A (N-40)	1374
R449A (XP40)	1397
R452A (XP44)	2141
R134a	1430
R450A (n-13)	604
R513A (XP10)	631

# The EcoDesign regulation

The implementation of the EcoDesign directive for “refrigerated display cabinets with a direct sales function” was adopted by the European Union Commission in October 2019. The application date for the requirements is the 1st of March 2021. The directive applies to newly produced refrigerated cabinets only – the systems,

racks and condensing units are covered by other regulations. The compliance is declared by the manufacturer with the declaration of conformity and with providing technical data to a European database called EPREL and the CE-mark. A verification procedure will be applied by the member states.

**All Celsior products presented in this catalogue are EcoDesign compliant.**

## Energy Labelling

The objective of Energy Labelling is to give clear, easy-to-understand label information on the product energy efficiency, and classify products according to their level of efficiency (from G to A), with an overall effect of pulling the market towards more energy efficient products. Products marketed prior to March 2021 are not affected.

ENERGY EFFICIENCY CLASS	ENERGY EFFICIENCY INDEX
<b>A</b>	<b>EEI &lt; 10</b>
<b>B</b>	<b>10 ≤ EEI &lt; 20</b>
<b>C</b>	<b>20 ≤ EEI &lt; 35</b>
<b>D</b>	<b>35 ≤ EEI &lt; 50</b>
<b>E</b>	<b>50 ≤ EEI &lt; 65</b>
<b>F</b>	<b>65 ≤ EEI &lt; 80</b>
<b>G</b>	<b>100 &gt; EEI ≥ 80</b>

## The Label

Each new refrigerating appliance will be supplied with a printed label gathering energy related information:

The diagram shows a standard EU Energy Label for a refrigerated display cabinet. The label includes the following information:

- Supplier's name**: Located at the top left of the label.
- Supplier's model identifier**: Located at the top right of the label, next to a QR code.
- Determined energy efficiency class**: Indicated by a large arrow pointing to class **B** on the efficiency scale.
- Annual energy consumption in kWh**: Shown as **XYZ kWh/annum**.
- Sum of the display areas with chilled operating temperatures in m²**: Indicated by a refrigerator icon and the value **XYZ L or m²**.
- Sum of the display areas with frozen operating temperatures in m²**: Indicated by a snowflake icon and the value **XYZ m²**.
- Temperature ranges**: For both chilled and frozen sections, the highest and lowest temperatures are listed as **XY°C**.

At the bottom right of the label, the date **2019/2018** is printed.

# Excellence in tests and qualification of cabinets

Outstanding technology based on 60 years development experience

With around twenty testing rooms, Celsior is one of the best-equipped manufacturers in Europe. Most testing rooms are equipped, according to the ISO 23953 standard (refrigerated display cabinets classification, requirement and test conditions), to ensure comparable and good product performance. Besides fulfilling ISO 23953 requirements, Celsior has its own internal tests, standards and requirements that each cabinet has to pass before going to market. This ensures the right quality and is reflected in robust, reliable products to maximize the lifetime of each refrigerated display cabinets.

## Measuring temperature performance

Celsior declares the temperature performance of the cabinet, according to the ISO 23953 standard, which defines the refrigerated cabinet requirements and test conditions.

### ISO 23953 - Refrigerated display cabinets classification, requirement and test conditions

The refrigerated display cabinets are classified according to the standard ISO 23953. This standard defines the classification, requirement and test conditions for representative refrigerated display cabinets including: the minimum size of the test room, side air-flow, light intensity, temperature and humidification control, calibrated measurements, etc.

Thanks to ISO 23953, customers can compare temperature classification according to the same testing procedure for all manufacturers in Europe who strictly follow the standard.

### Climate room requirements and setup

ISO 23953 defines exactly the requirements and tolerances of a climate room including:

- Size of the room
- Side airflow speed and direction relative to the cabinet
- Calibration of the measurement equipment
- Where to place the cabinet in the climate room
- Color of room and light intensity

Example of Celsior testing room. The above picture illustrates how a climate room for testing the refrigeration equipment looks like.

### Climate class – describes the environment outside of the cabinet

Of the several climate classes available under the standard, commercial refrigeration usually performs class 3 to measure and declare the temperature performance.

Example: "climate class 3"  
Temperature: 25 °C  
Rel. humidity: 60 %

### Temperature class – describes the temperature performance inside the cabinet

The temperature performance is tested in a cabinet with product-simulation models which are called M-package. The M-package simulates thermal characteristic of meat products.

Cabinet temperature performance means:

- How well the cabinet holds the temperature of a chilled or frozen product – simulation models at lab climate conditions
- How small the cabinet storage temperature deviation of product is – simulation models at lab climate conditions
- Temperature performance is tested by simulating different operation use cases: shop closed (light off, night curtain down, no door opening) shop open and commissioning of cabinet (doors / lids long open) shop open consumer take products (regular door / lid opening)

There are three main temperature class groups: Low, Medium and High temperature. These main groups are split in different temperature classes indicated by a number following the group letter: Example M2. The higher the number the higher the difference between the lowest M-package temperature and highest M-package temperature.

Example: "Temperature Class M2"  
(Medium temperature class 2)  
Warmest M-package: max. +7°C  
Coldest M-package: min. -1 °C

### Link between climate class and temperature class

Because the temperature inside a cabinet is strongly influenced by the environment's temperature and humidity, the temperature class is only a meaningful declaration if it is linked to a climate class. For this reason, a full cabinet declaration always consists out of climate class and temperature class.

Example "3M2" (At climate class 3, the cabinet reaches temperature performance M2)  
3= climate class (certain ambient test condition during testing)  
M2= Temperature class (specified highest and lowest M-package temperature)

## Laboratory vs. operation in real store environment

According to the ISO 23953-2 standard Appendix B, there are significantly different operation conditions between lab and store operation, especially for remote cabinets. The following section describes and explains the difference to the application in the field.

### Difference between laboratory and store data for remote cabinets

The conditions of a remote cabinet in the store differ very much from the lab conditions. Usually the cabinets in a store are multiplexed, located against a wall and the ambient conditions are lower. Using direct lab data for remote cabinets would lead to an oversizing of piping and compressor racks. Based on this, Celsior provides E6 remote cabinets in the technical data sheets rack sizing data for the standard configuration at store condition 25°C / 60% rel. H. and 22°C / 55% rel. h. This data is available and optimized for each investment and life cycle.

Based on Celsior's leading expertise in refrigerant system design, our general recommendation is:

- Rack design data 25/60 application:  
Stores in warm climates, stores with difficult climate situations, cabinet in a non-ideal place (high humidity, high temperature, close to a door etc...)
- Rack design data 22/55 application:  
Store in middle and north Europe, stores with moderate climate (with air conditions, multiplexing remote cabinets)

### Technical data for plug-in cabinets

To have comparable energy consumption within the Celsior range, we specify the energy consumption for the standard configuration of plug-in cabinets according to ISO 23953 and climate class 3 conditions. This makes the data comparable; however, the real energy consumption in a store is usually lower.

### Influence of the cabinet installation on the performance

The installation can have major effects on the energy and temperature performance. There are some requirements, which need to be kept to ensure that the cabinets are working properly.

- Do not install the cabinet outside or next to heating radiators or other heat sources
- Keep a distance from the wall as indicated in the operating manual
- Avoid direct sunlight radiation impact
- Keep free the air intake and outlet area (only plug-in)

Example of a plug-in cabinet which needs free air flow on front and top of cabinet.

## Celsior internal testing

To ensure a long life-time and proper operation, Celsior has defined internal standards for robustness and stress tests of cabinets as well as components.

### Static robustness test

To test the cabinet and shelf strength, all shelves are loaded with a certain weight for several days. The deflection of brackets and shelves is checked under load and after unloading the cabinet. Only if the cabinet deflection and deformation stays within the small tolerances defined by the Celsior quality department, the cabinet will be released to the market. With high requirements on cabinet stability and strength, Celsior ensures a high-quality product that is safe and stable for years of operation.

### Dynamic testing of doors and lids

The door opening test makes it possible to simulate several years of usage that our doors, hinges, and handles are likely to experience within just a few weeks. During the test, the system is continuously monitored and checked in terms of abrasion, break / damage and deformation. The system will only pass the internal qualification if it can resist several simulated years in the tough life of a supermarket.

For double glass doors, Celsior requires additional tests to ensure that the sealing works properly and the doors do not get condensation between the glasses after some years.

### Packaging and shipping test

Before each serial launch, Celsior conducts a special packaging and transportation test. This happens with one or several cabinets in a truck going on a defined road with various road conditions. After the transport, the cabinet and the packaging are checked visually. This ensures that the cabinets will arrive to our customers in the same condition as they were packaged in the factory.

## CE (Conformité Européenne) certification

The Celsior cabinets are compliant with the relevant standards or parts of the standards as confirmed with the CE declaration of conformity:

- ISO 23953-1 (Refrigerated display cabinets, general)
- ISO 23953-2 (Refrigerated display cabinets, requirement)
- EN 60335-1 (Household and similar electrical appliances. Safety. General requirements)
- EN 60335-2-89 (safety requirement for household and similar electrical appliances, particularly for commercial refrigerating appliances)

To ensure maximum safety, all plug-in cabinets with flammable refrigerant are additionally CE certified by an independent body.

## Factory certifications

**All Celsior cabinet factories have a certified quality management and environmental management systems**

- EN ISO 9001 (General quality management system)
- EN ISO 14001 (Environmental management systems)

# Easy to use in daily operation

Our products are specially conceived to be easy to install, maintain and clean.

An example of Easy to use in daily operation & service for Easy Cube:

Clean the condenser  
in 2 minutes

Quick removal and  
easy cleaning of the  
air guidance

Easy access to  
drip tray for quicker  
cleaning

Easy transportation  
and re-location with  
manual forklift

Simple change of compressor  
and other components in the  
machine compartment

## With Celsior, the spare parts you need are never far away.

Gain peace of mind and improve performance with Celsior products. At Celsior, we supply quality spare parts on time. In fact, critical parts are kept in stock and can be shipped within hours to support customer installations. We stock spare parts for every current Celsior cabinet and rack model, ensuring availability of parts for many years after their installation. At Celsior we make ordering spare parts as easy as possible for customers. Simply contact or visit your local Celsior service branch office.

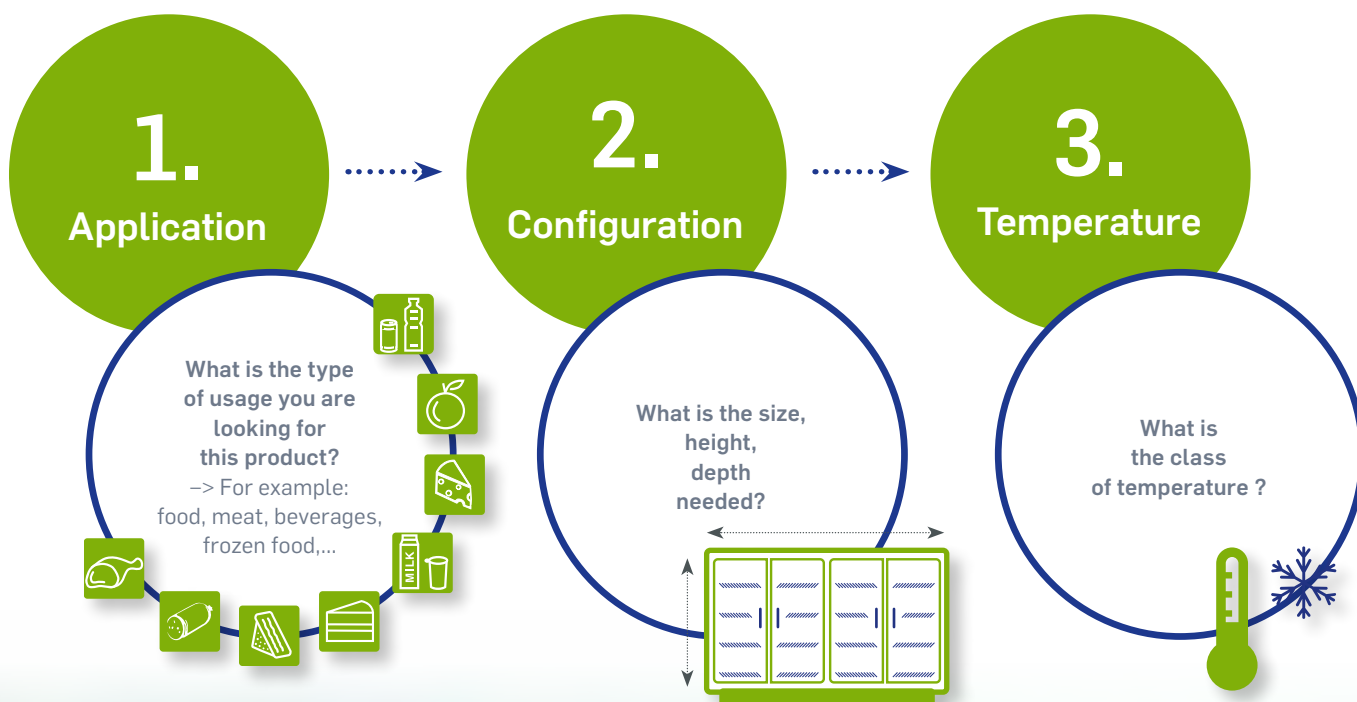

# How to select your product?

**Regardless of store size, Celsior is always the right fit.**

Use the following guidelines to determine which Celsior product will fit your need:

Then, you can find on every product page all the details you need.

Need some help with your application? Feel free to contact us.

# Plug-in & remote cabinets in comparison

We can split the refrigerated display cabinets into two types. Remote cabinets have a common central condensing system which supplies several units with the refrigerant. The cabinets have a fixed location and are connected with pipes and wires to the central compressor rack and controller unit. Plug-in cabinets work like a household fridge and have the compressor, condenser and controller unit built into the cabinet itself; they only need a power supply. Both systems come with several advantages and trade-offs.

## Plug-in system

### Advantages:

- No piping / installation needed
- No machinery room
- Very flexible layout changes

### Trade-offs:

- Head rejection in store (bigger air condition needed)
- Less space inside the cabinet
- Regular cleaning of condenser
- Higher energy consumption

Plug-in cabinet with characteristic machine compartment, which includes compressor, drip water evaporation and condenser.

## Remote system

### Advantages:

- Lower system energy consumption
- Low-noise
- Large usable volume for products
- Wide range of multiplexing options
- Open Cabinet de-humidify store climate

### Trade-offs:

- Installation needed
- Fixed installation, not flexible

Remote cabinets connected to the central rack with the gas cooler

# Powder paint

## selection guide

When it comes to customization, Celsior offers a wide range of possibilities in the design of each product – from the front aesthetic to the endwalls and pedestals. These are available in a variety of designs, material finishings and colors. Through the creative use of colors, you can illustrate an inviting and pleasant atmosphere that evokes positive emotions. Shades of reds can express passion, enthusiasm, and energy; whereas blue and green express nature and freshness.

## Essential colors

Benefit from a nice design at the best price level

## Smart colors

Make the cabinet your style at the best value for money

## Exclusive colors

Differentiate your market and customize your cabinet in a wide range of colors. Contact your local sales representative for more information.

# Celsior's small store program

Celsior has developed a program that offers solutions for the specific conditions and requirements of small store formats. The chillers and freezer display cabinets in Celsior's small store program provide optimal presentation of food in limited retail space – small dimensioned and in homogeneous design.

A variety of lengths allow for the ideal adaptation of the cabinets to any given store dimensions (such as wall lengths). The combination of remote and plug-in solutions are well suited to the small store concept with building restrictions and are flexible enough to accommodate changes or enlargement of the refrigerated or frozen food range. Celsior's small store program has been designed with forthcoming environmental legislation in mind – both the remote as well as the plug-in cabinets can be operated with natural refrigerants.

# Plug-in Line

## **PLUG IN TO HIGHER EFFICIENCY AND CAPACITY PERFORMANCE.**

With a broad portfolio of products using R290 refrigerant, Celsior plug-in cabinets bring energy savings to all food retail formats. Add to that the fact that there's no need for other system components and you have the perfect combination of simplicity and sustainability.

# Areor® Family

- With the **Areor® Family** you have the perfect solution to display your convenience products. All follow the same principle to deliver:
- Perfect **product visibility**, thanks to the transparent superstructure – for an unobstructed view of the products
- Optimized **floor space usage** – whether designed as a single, row or block layout
- **Different heights** available to fit your needs and preferences
- **Harmonized design** for the whole stepped range
- **Low life-cycle costs** thanks to a sliding condensing unit improving maintenance & serviceability
- **Flexible for daily use** thanks to an easy re-allocation

# Areor® Total Transparency

Highly transparent, plug-in counter-island

## Benefits at a glance

- Full product view through highly transparent cabinet design
- Robust and durable for daily use through scratch resistant glass superstructure
- Simplified maintenance and service due to slidable condensing unit
- Stylish design and cladding options for seamless integration into store layout

## Standard configuration

- Elegant, highly transparent glass superstructure
- Plinth of galvanized steel with powder coated finish, body internal and external PVC, outside and inside color black (RAL 9005)
- Stainless steel bumper
- Temperature-assured forced-air cooling
- Solar-thermometer
- Electronic controller
- EC-fans
- Slidable condensing unit
- Natural refrigerant R290 (propane)

## Accessories

# Areor® ST 1040

## Small plug-in counter-island in transparent design

### Benefits at a glance

- Outstanding design and product visibility
- Small size fits in each corner for cross-selling of products
- Block grouping possibilities

Areor® ST 1040

### Standard configuration

- Transparent superstructure with acrylic sidewalls
- Two glass shelves (Areor® ST)
- Temperature-assured forced-air cooling with air outlet
- Powder coated finish in black
- Stainless steel bumper
- Energy saving condenser fan
- Electronic controller
- Factory installed castors on back-side
- Natural refrigerant R290 (propane)

# Optimer® Low Front

Refrigerated plug-in multideck with maximized display area

## Benefits at a glance

- Harmonized design with Velando® CS and Mendos® for a consistent store layout
- Ideal merchandising with enlarged product facing area and fully transparent doors
- Multiplexing for improved floor space productivity

## Standard configuration

- Painted panels galvanized steel with hard-wearing powder coated finish, FA0605 white interior, FA0633 nimbus grey exterior
- Panorama endwalls
- Integrated front bumper
- Temperature-assured forced-air cooling with honeycomb air outlet
- Energy saving fans
- 5 Display shelves with 40 mm scanner price rails
- LED (R290)
- Manual nightblind or double glass door, tempered
- Electronic controller
- Slideable condensing unit for easy service

# Crystal Chiller

## Plug-in chiller island for promotional sales

### Benefits at a glance

- Highly transparent
- Successful staging of seasonal products
- Large product facing area for outstanding product visibility
- Transparent product dividers for quick orientation

COC22

### Standard configuration

- Internal and external panels galvanized steel with hard-wearing white powder-coated finish
- Electronic controller
- Temperature assured air-forced cooling
- Automatic defrost with drip water evaporation
- Handrail lighting at the front
- Analog thermometer

# Impulse cooler

## Bottle cooler for promotion and impulse sales

IC 100

### Benefits at a glance

- A point-of-purchase merchandiser and marketing tool like no other
- High product visibility increases impulse sales
- Easy refill of products
- Small footprint ideal for c-stores and kiosks

### Standard configuration

- Panels galvanized steel grey powder-coated finish
- Robust plastic opening on top
- Automatic drip water evaporation using waste heat of refrigeration system
- Single-row lighting in canopy
- Power cable

**CO<sub>2</sub>OLtec Evo:** next generation of CO<sub>2</sub> technology which leverages and combines several innovations to optimize the total CO<sub>2</sub> system efficiency:

- Energy saving heat exchangers
- Ejector operation optimized expansion valves
- Extended operation flexibility: All 60 bar CO<sub>2</sub> evaporators now operate with 90 bar expansion valve and 90 bar liquid line

# E6 Mirado® & E6 Morea®

Prime Line

Open semi-vertical multideck with a modern and space optimized design

## Operation optimizer / Space optimizer

## Benefits at a glance

- Maximum display opening by slim canopy
- Ergonomic height
- Floor space efficient design
- Enhanced visibility in the store

## Standard configuration

- Manual night blinds
- Stepped display shelves with 40 mm scanner price rails
- Integrated bumper and single-piece front kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas) / Mirado 63.M1-2 with backwall evaporator (F-gas)
- Multiplex kit

## Customization

- LED selection for canopy lighting, shelf lighting and front shelf lighting
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Plinth bumper for increased protection
- Bottom evaporator (CO<sub>2</sub>) / Mirado 63.M1-2 with backwall evaporator (CO<sub>2</sub>)

The semi-vertical size provides ergonomic height and customer contact on eye level

The maximum display opening and the stepped display shelves offer the best presentation of your products

The backwall evaporator of Mirado 63 provides benefits such as a maximum front opening and self cleaning effect by defrosting

# E6 Mirado® GS & E6 Morea® GS

Prime Line

**Closed semi-vertical multideck with a modern and space optimized design**

## Operation optimizer / Space optimizer

## Benefits at a glance

- Maximum display opening by slim canopy
- Ergonomic height
- Floor space efficient design
- Enhanced visibility in the store

## Standard configuration

- Transparent framed sliding glass doors
- Stepped display shelves with 40mm scanner price rails
- Integrated bumper and single-piece front kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas) / Mirado 63-GS.M1-2 with backwall evaporator (F-gas)
- Multiplex kit

## Customization

- Horizontal LED lighting for canopy, shelf and front shelf
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Plinth bumper for increased protection
- Bottom evaporator (CO<sub>2</sub>) / Mirado 63-GS.M1-2 with backwall evaporator (CO<sub>2</sub>)

The semi-vertical size provides ergonomic height and customer contact on eye level

The standard bottom evaporator ensures a balanced floor space efficient design for the best placement in the center of your store, no matter if supermarket, hypermarket or discounter

Mirado 63-GS comes with backwall evaporator which provides maximum display opening together with high service durability of fans and evaporator

# E6 Methos

Prime Line

Open multideck with an optimized footprint and best customizable design

## Narrow merchandiser / Space optimizer

## Benefits at a glance

- Highest footprint productivity
- Largest selection of configurations
- Easy access to evaporator and fans
- Optimized design for back-to-back installation

## Standard configuration

- Motorized night blind (30-50 % less energy consumption)
- Display shelves with single side coating and 40 mm scanner price rails
- Integrated bumper and kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

## Customization

- Horizontal LED lighting for canopy, shelf and front shelf
- LED lighting DIM module
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Reinforced front bumper
- Bottom evaporator (CO<sub>2</sub>)

The installed bottom evaporator provides the best floor space productivity among all multideck cabinets for your turnover

Optional external bumper for increased protection of the cabinet

The optimized small footprint design makes the Methos multidecks perfect for space saving back-to-back installations in your market (Inox bumper by local customization)

## Open multideck for best product presentation with lowest life cycle costs

### Operation optimizer

### Benefits at a glance

- Lowest life cycle costs
- Best maintenance conditions
- Energy efficient design
- Attractive product presentation

### Standard configuration

- Low front height (295 mm)
- Carrier's Temperature Equalizer System
- Double air curtain for cabinets with temperature class M1 (approx. 10 % less energy consumption)
- Display shelves with 40 mm scanner price rails and product stoppers
- Integrated front bumper and kickplate
- Energy efficient EC fans
- Back wall evaporator (F-gas)
- Multiplex kit

### Customization

- Night blind options:
  - Motorized (30-50 % less energy consumption)
  - Motorized with efficient cover (40-70 % less energy consumption)
- Horizontal LED lighting for canopy, shelf and front shelf
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Reinforced front bumper and endwall
- Plinth front bumper and endwall
- Back wall evaporator (CO<sub>2</sub>)

The back wall evaporator enables easy installation and maintenance due to a total clearance height of 125 mm

The closed motorized nightblind with efficient cover saves 40-70 % energy compared to the open operation

Easy to clean bottom area by back wall evaporator with simple access of the expansion valve

## Closed multideck with attractive design and lowest life cycle costs

### Operation optimizer

### Benefits at a glance

- Lowest life cycle costs
- Best maintenance conditions
- Energy efficient design
- Attractive product presentation

### Standard configuration

- Low front height (295 mm)
- Carrier's Temperature Equalizer System
- Insulated all-glass swing door with small dark grey print and mullion
- Display shelves with 40 mm scanner price rails
- Integrated front bumper and kickplate
- BREEZtec EC fans (Carrier's Next Generation Air Circulation System)
- Back wall evaporator (F-gas)
- Multiplex kit

### Customization

- Large selection of door options:
  - Transparent all-glass swing door with or without mullion
  - Transparent, anti reflex coated all-glass swing door with or without mullion
- Horizontal LED lighting for canopy, shelf and front shelf
- Vertical LED lighting for door mullion, dividing wall and endwall
- LED lighting DIM module
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Reinforced front bumper and endwall
- Plinth front bumper and endwall
- Back wall evaporator (CO<sub>2</sub>)

The back wall evaporator enables easy installation and maintenance due to a total clearance height of 125 mm

The low front height of 295 mm provides for attractive cabinet aesthetics

Low energy consumption and short maintenance time secure extreme low life cycle costs

# E6 Maress® & E6 Maress® GD

Prime Line

Open/closed multideck for heavy product load with optimized life cycle cost

## Volume seller

## Benefits at a glance

- Maximum front opening
- Perfect design for heavy product load & box stacking
- Short service and maintenance times
- Optimized life cycle cost

## Standard configuration

- Ultra-low front (220 mm)
- Carrier's Temperature Equalizer System
- Open cabinets with double air curtain (approx. 10 % less energy consumption)
- Closed cabinets with insulated all-glass swing door with small dark grey print and mullion
- Display shelves (open cabinet with additional heavy-duty bottom display deck)
- Integrated front bumper and kickplate
- BREEZtec EC fans (Carrier's Next Generation Air Circulation System)
- Back wall evaporator (F-gas)
- Multiplex kit
- Maress 82.M2-2 D with motorized night blind (30-50 % less energy consumption)

## Customization

- Night blind options for open cabinets:
  - Motorized (30-50 % less energy consumption)
  - Motorized with efficient cover (40-70 % less energy consumption)
- Closed cabinets with large selection of door options:
  - Transparent all-glass swing door with or without mullion
  - Transparent, anti reflex coated all-glass swing door with or without mullion
- Horizontal LED lighting for canopy, shelf and front shelf
- Closed cabinets with vertical LED lighting for door mullion, dividing wall and endwall
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Reinforced bumper for endwall
- Back wall evaporator (CO<sub>2</sub>)

The back wall evaporator enables easy installation with short service and maintenance times

The ultra-low front height of only 220 mm provides a maximum front opening

The Maress product family is perfectly designed for heavy product load and stacking of boxes

# E6 Monaxis®-R & E6 Maress®-R

Prime Line

Open roll-in multideck with a robust & energy efficient design

Volume seller

## Benefits at a glance

- Robust cabinet for heavy product load
- Fast and easy loading
- Hygienic cabinet design

## Standard configuration

- Motorized night blind (30-50 % less energy consumption)
- Two liftable front heights:
  - Monaxis-R with low front height (295 mm)
  - Maress-R with ultra-low front height (220 mm)
- Easy to use front lift allows use of roll-in trolley
- Carrier's Temperature Equalizer System
- Dual air curtain for approx. 10% less energy consumption
- Display shelves with wire fences (lower shelf with air control), Monaxis-R with 40 mm scanner price rails
- Integrated front bumper and kickplate
- Energy efficient EC fans
- Back wall evaporator (F-gas)
- Multiplex kit

## Customization

- Motorized night blind with efficient cover (40-70 % less energy consumption)
- Horizontal LED lighting for canopy, shelf and front shelf
- Monaxis-R with LED lighting DIM module
- Large selection of shelves, price rails & front stopper
- Reinforced front bumper and endwalls
- Back wall evaporator (CO<sub>2</sub>)

Robust cabinet design for heavy product load and box stacking

The easy-to-handle, movable front mechanism, allows the use of roll-in trolleys or pallets for stocking of heavy stacked products

The dual air curtain provides optimized temperature distribution inside the Roll-in cabinet

## Basic open multideck with the highest footprint productivity

### Narrow merchandiser / Space optimizer

### Benefits at a glance

- Very high footprint productivity
- Optimized design for back-to-back installations
- Easy access of evaporator and fans

### Standard configuration

- Motorized night blind (30-50 % less energy consumption)
- Display shelves with single side coating and 40 mm scanner price rails
- Integrated bumper and kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

### Customization

- Horizontal LED lighting for canopy, shelf and front shelf
- Large selection of shelves, hooks, price rails and front stoppers
- Reinforced front bumper
- Bottom evaporator (CO<sub>2</sub>)
- Transparent raised front to reduce energy consumption

The installed bottom evaporator provides the best floor space productivity among all multideck cabinets for your turnover

Backwall mirrors greatly enhance product visibility

Product stoppers protect air flow and improve presentation

# E6 Mivit<sup>®</sup> & E6 Mivit<sup>®</sup> GD

Value Line

Basic multideck design with high standards

Narrow displayer / Volume seller

## Benefits at a glance

- Maximum front opening
- Open/closed E6 Mivit 52 with slim footprint at highest total display area
- E6 Mivit 82 GD designed for box stacking capacity for high turnover

## Standard configuration

- Ultra-low front (220 mm)
- Closed cabinets with insulated all-glass swing door with small light grey print and mullion
- Display shelves and 40 mm scanner price rails
- Integrated bumper and kickplate
- Back evaporator (F-gas)
- Multiplex kit
- Mivit 52 open & closed with BREEZtec EC fans (Carrier's Next Generation Air Circulation System)

## Customization

- Night blind options for open cabinets:
  - Motorized (30-50 % less energy consumption)
  - Motorized with efficient cover (40-70 % less energy consumption)
- Transparent all-glass swing door with solid mullion for closed cabinets
- Horizontal LED lighting for canopy, shelf and front shelf
- Closed cabinets with vertical LED lighting
- Back wall evaporator (CO<sub>2</sub>)
- Transparent raised front for Mivit 52 to reduce energy consumption

The back wall evaporator provides maximum display opening and self cleaning effect by defrosting

The ultra-low front height of only 220 mm provides a maximum front opening

Easy to clean bottom area by back wall evaporator with simple access of the expansion valve

# E6 Mirado® FV

Ultrafresh Line

Open semi-vertical multideck with optimized design for ultrafresh goods

Space optimizer / Operation optimizer

## Benefits at a glance

- Maximum display opening by slim canopy
- Ergonomic height
- Special shelving for F&V presentation
- Enhanced visibility in the store

## Standard configuration

- Stepped display shelves with 50 mm wire fence
- Sheet metal design for rear wall
- Integrated bumper, integral bumper and single-piece front kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas) / Mirado 63.M1-2 with back wall evaporator (F-gas)
- Multiplex kit

## Customization

- Manuel night blinds
- LED selection for canopy lighting, shelf lighting and front shelf lighting
- Stainless steel interior
- Large selection of shelves, hooks, price rails and front stoppers
- Plinth bumper for increased protection
- Bottom evaporator (CO<sub>2</sub>) / Mirado 63.M1-2 with backwall evaporator (CO<sub>2</sub>)
- Stepped display shelves with brackets (up to 27°) and reinforced scanner price rails

The semi-vertical size provides ergonomic height and customer contact on eye level

The maximum display opening and the stepped display shelves offer the best presentation of your products

Display shelves with brackets (up to 27°) and reinforced scanner price rails for best product presentation

# E6 Program Features

All 60 bar CO<sub>2</sub> evaporators operate with 90 bar expansion valve and 90 bar liquid line

## Benefits

- Modern design concept
- Increased display area
- Flexibility in merchandising
- EN ISO 23953 classification
- Energy & service efficiency
- Reduced lifecycle cost

Approx. 11%  
larger glass area

25 mm shelf  
spacing

Numbered shelving

Price rail located  
close to products;  
stopper included

Improved  
lighting

## BREEZtec

### Carrier's Next Generation Air Circulation System

#### Energy & economical efficiency

- Reduction of energy consumption from 30 to 45% compared to conventional EC fans<sup>1</sup>
- Energy cost savings per cabinet result from 50 to 70 Euro per year<sup>2</sup>
- Designed for a high service durability

#### Operation & noise emissions

- Provides homogeneous and highly efficient temperature distribution by combining Carrier Temperature Equalizer System (TES) and EC fan motors
- Reduced sound pressure level by up to -4dBA
- Better noise quality by smooth spectrum with lower tonal content

#### Application

The new BREEZtec air circulation system is optimized for all remote E6 Multidecks and E6 Semi-Verticals with back evaporator design.

Latest EC fan motor technology with new Carrier patented fan housing and fan blade design for improved energy efficiency and reduced noise emission.

Remote multideck with back evaporator design showing the position of the new Carrier fan technology and the optimized air circulation inside the cabinet for a better homogeneous product storage temperature.

# E6 Virando® 63

Prime Line

Semi-vertical freezer for the new center of your market

NEW

## Benefits at a glance

- Large loading volume at low height
- Ideally suited for market center installations
- Perfectly combinable with chiller semi-verticals from E6 Mirado® range

## Standard configuration

- Black Anti-Fog (AF) all-glass doors
- Black ergonomic door handles
- Wire shelves with front-to back rods
- Vertical LED lighting for mullions
- Integrated bumper and kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

## Customization

- Horizontal LED lighting for canopy
- Large selection of display baskets, wire shelves, bottom racks and wire dividers
- Plinth front bumper and endwalls
- Bottom evaporator (CO<sub>2</sub>)

Perfectly combinable with semi-vertical chiller E6 Mirado® to present a large range of products in small place

Semi-vertical low height of only 1,60m enhances vision and display in your market and improves the contact between customers

Wide range of accessories with wire shelves, display baskets and telescopic display baskets for easy loading

Prime Line

## Premium vertical freezer with large storage capacity

### Space optimizer

### Benefits at a glance

- Enhanced visibility of presented goods
- Large storage capacity
- Simplified maintenance
- Lower energy consumption with optional High Efficiency Frame

### Standard configuration

- Anti-Fog (AF) non-heated passive glass doors
- Ergonomic door handles
- Vertical LED lighting
- Two piece cabinet front with bumper profile
- Single piece front kickplate
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

### Customization

- High Efficiency Frame (HEF) reduces energy consumption
- Panorama and non-glazed endwalls
- Horizontal LED lighting for canopy
- Large selection of display baskets, wire shelves, bottom racks, wire dividers and pricing rails
- Bulk section with telescopic basket
- Plinth front bumper and endwalls
- Bottom evaporator (CO<sub>2</sub>)

Wide range of accessories with wire shelves, display baskets and telescopic display baskets for easy loading

The optional High Efficiency Frame with glass fiber-reinforced plastic significantly reduces the vertical freezers energy consumption

E6 Velando AF with High Efficiency Frame (HEF) provides the best energy performance within freezer cabinet portfolio

## Closed island – transparency on the next level

### Benefits at a glance

- Increased transparency for better product visibility from all sides
- Comfortable and ergonomic product access
- Modern square design & various customization options for individual style

### Standard configuration

- Glass lids available with Push-T, Push-3 or Sliding system
- Slim handrail located on lower level at only 89,5 cm height for better product access
- Exterior color in dark grey or light grey
- Fully glazed panorama endwalls
- Improved LED handrail lighting
- Integrated bumper
- Transparent handle
- Interior price rail near handrail

### Customization

- Transparent profiles for glass lids
- External bumper for increased protection
- Customizable claddings for example in wooden pattern
- Improved LED lighting for sidewalls and canopy (middle beam)
- Gable price rail with two or three partitions (40 mm or 52 mm)
- Square stainless-steel bumper for increased protection
- Removable 1,25 m transparent superstructure shelf with price rails for product load up to 60 kg/module

15% larger glass surfaces and improved LED lighting on handrails, middle beam and sidewalls for excellent product visibility

Easy to open, curved glass lids reducing light reflections and transparent profiles provide perfect transparency

Fully glazed panorama endwalls and sidewalls with optional cladding in wooden pattern and stainless steel bumpers

## Open chiller island – highlighting your special products

### Space optimizer

### Benefits at a glance

- Modern squared design with frameless 360° glazing
- Excellent display for pre-packaged products
- Enhanced product visibility with various cladding options

### Standard configuration

- Single front glass panel
- Panoramic endwall
- Paintable metal front panel for individual style
- Fully glazed panorama endwalls
- Energy-efficient EC fans
- Bottom evaporator (F-gas)

### Customization

- Wooden front panel
- Squared stainless steel bumpers on the fronts and sides, 20x20mm (polished or brushed)
- External bumper for increased protection
- Stainless steel interior
- Premium LED for canopy (middle beam)
- Plinth lighting with Premium LED for an attractive store atmosphere
- Bottom evaporator (CO<sub>2</sub>)

Cladding options available in wood or metal with or without stainless steel bumpers

Optional external lighting at the bottom of the island provides an inviting ambience in the store

Frameless front single glazing and panoramic endwalls ensure best product visibility

## Closed freezer and chiller island with classic basic design

### Space optimizer

### Benefits at a glance

- Available as freezer and chiller cabinet
- Large product facing area
- Flexible layout
- Heavy product load

### Standard configuration

- Curved, frameless sliding glass lids for longitudinal cabinet
- Flat sliding glass lids for crown end
- Insulating front glass with 385 mm height
- White powder-coated internal fittings
- Superstructure for price rails with two partitions
- Single-piece kickplates
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

### Customization

- Push-2 or Push-3 glass lids
- Aluminium handrail
- LED lighting for handrail & front and back
- Island superstructures for optimized footprint productivity
- Large selection of wire shelves, covers, product divider and price rails
- Reinforced front bumper, endwall and dividing wall
- Plinth front bumper and endwall
- Bottom evaporator (CO<sub>2</sub>)

Irios GL+ is available in temperature class M2 and L1 to present normal or low temperature goods

The durable design is perfectly suitable for heavy product loads

Superstructures for price rails with 3 partitions and additional dry superstructure shelf to extend your sales per m<sup>2</sup>

# Ivando® GL+ & Wisalo® GL+

Value Line

**Closed island with dual compartment for high sales flexibility**

## Flexible merchandiser

## Benefits at a glance

- Ivando GL+ with dual compartments allows the use of two temperature ranges in one island
- Wisalo GL+ for an optimal freezer solution for wallside displays
- High cabinet flexibility

## Standard configuration

- Ivando GL+ with two separately refrigerated display compartments
- Ivando GL+ & Wisalo GL+ with curved, frameless sliding glass lids
- Flat sliding glass lids for Ivando GL+ crown end
- Insulating front glass with 385 mm height
- White powder-coated internal fittings
- Superstructure for price rails with two partitions
- Single-piece kickplates
- Energy efficient EC fans
- Bottom evaporator (F-gas)
- Multiplex kit

## Customization

- Push-2 or Push-3 glass lids
- Aluminium handrail
- LED lighting for handrail & front and back
- Large selection of wire shelves, covers, product divider and price rails
- Reinforced front bumper, endwall and dividing wall
- Plinth front bumper and endwall
- Bottom evaporator (CO<sub>2</sub>)

The two separately refrigerated display compartments permit joint presentation of normal and low temperature products in one cabinet

The classic island design with large-sized glass panels provides a clear view of the product variety even from long distances

The wallside display of Wisalo GL+ is the optimal supplement for the freezer solution in your market

## Closed island with small footprint for narrow aisles

### Narrow merchandiser

### Benefits at a glance

- Narrow depth for small footprint and flexible use
- Available as frozen & chiller island
- Two different models with single or double compartment
- Classic reliable island design

### Standard configuration

- Insulating front glass with 190 mm (SG2) or 380 mm (SG4) height
- Frameless sliding glass lids with safety glass
- White powder-coated internal fittings
- Superstructure for price rails with two partitions
- Integrated bumpers and single-piece kickplates
- Energy-efficient EC fans
- Bottom-evaporator (F-gas)
- Multiplex kit

### Customization

- Horizontal LED lighting for handrail
- Island superstructure for more non tempered display space (only AIB SG2-GL+)
- Large selection of wire shelves, wire dividers and price rails
- Bumper for endwall
- Bottom evaporator (CO<sub>2</sub>)

The narrow depth of only 1490 mm provides a small footprint and allows use in limited store spaces

AIB SG2-GL+ is available in temperature class M1 and L1 to present normal or low temperature goods

AIB SG4-GL+ comes with high and large glass panels for best product visibility

# Counters Line

## ONE PRODUCT FAMILY. HUNDREDS OF COUNTER SOLUTIONS.

With today's stores carrying an increasingly diversified fresh food offering, they need an equally diverse range of attractive merchandising solutions.

The product offer Celsior is innovative, resolutely customizable and always meeting the highest standards of refrigeration quality to meet your expectations.

# Carucco Range

## Timeless beauties: Carucco range with unlimited combination & design options

- The Carucco program is an element program, which boasts numerous combination and design options. The cabinet base remains the same and with diverse glass superstructures: straight, curved or semi-vertical.
- Whether serve-over or self-service variants, corner elements, crown ends or special application cabinets – counters from the same line can easily be combined – the variations are infinite.
- With several pedestal solutions, different cabinet heights or applications, we give you the freedom to choose the solution that best suits your taste and requirements.

## Horizontal Range

### Straight Line

# External Aesthetics

## Front design, multiplexing kits & sidewalls

- **Front aesthetic:** Carrier offers a wide range of possibilities when it comes to the design of the counters. Front aesthetic, endwalls and pedestals are available in many designs, material finishings and colours.
- **Basement:** Closed basement models can have different front panel heights. Standard design has the thinnest front below the glass superstructure. Enhanced design features a higher front panel. Flat design aligns the full front in one pane with the superstructure.
- **Cladding:** Whether painted metal sheet, total Inox design or wood cladding, any solutions can be chosen for your refrigerated counters.
- **Multiplexing kits:** for a harmonic connection of different cabinets.
- **Sidewalls:** selectable depending on preferences: Flat, mirrored, thermopane, tempered for a line up of cabinets.

## Pedestals

- Pedestals are not just a supporting element of the cabinet but a fundamental part of the aesthetics becoming an integral part of the counter's design.
- Therefore, a good design of the pedestal will enhance the overall look of the counter line.
- Available materials include painted metal sheet, stainless steel, or even a unique solution, such as a wood laminate cover.
- In addition, the size and shape of the pedestal can vary from rounded to rectangular, to adapt to every store's need.

## Bumpers

- Bumpers serve a very technical need: they protect the appliance from damages potentially caused by shopping carts. However, they are also part of the front design.
- They can be square shaped or rounded, thin or thick. For stainless steel finishings, polished or brushed can be chosen.

## Claddings

- Laminate claddings offer a wide range of possibilities from simulating wood to stone and concrete - as you will see on the following pages.
- Carrier recommends to use 18 mm waterproof MDF as inner material, with 0,8 mm or 1 mm lamination on both sides. This will ensure the right level of strength and durability, easy cleaning, and protection from humidity.
- An aesthetical and long-lasting alternative is the use of ceramic tiles, applied to a flat surface. With an individual and creative combination, you may mix and match tiles to come up with your own unique design.

# Accessories

In addition to your choice of Carrier counters, a wide range of accessories can make the sales process faster and the shopping experience more enjoyable. The shop operator should be able to carry out operations efficiently. The less strain placed on the store's staff, the more attention they can devote to customers.

## Sliding accessories

Ergonomic use and flexibility in the placement of the accessories are combined in this solution.

## Integrated scales

Scales integrated into the service counter combining space-saving with ergonomics

## Integrated cutting board and knife sheath

Cutting boards with a laterally integrated knife sheath allow space-saving and deliver an ergonomic solution.

## Cutting board

Polyethylene cutting boards are commonly used in a service counter and are available in different colors: white for dairy, blue for seafood, red for meat, yellow for cheese or poultry.

## Paper tray

Stylish paper tray for excellent storage of paper on your service counter.

## Stepped display

Enhance your products in the counters with the use of a stepped display with 2 or 3 levels. Available in stainless steel or painted version.

## Night cover

Night covers provide an economical way to shield refrigeration cases and protect perishable food inside from ambient store heat and light.

## Night blind

Commonly used for open refrigerated cases the night blind is an ideal solution to save energy.

\* For more information on available accessories, please refer to our accessories catalogue.

## Counter – Special Solutions

# Marché Fresh

## The ideal self-service counter for impulse sales

Marché Fresh counters offer a great look. Stainless steel materials and modern lines easily integrate into the interior design of contemporary stores. Marché Fresh creates a highlight area that draws the shoppers' attention to the products on display.

## Benefits at a glance

- Flexibility with different modular lengths and heights
- Stylish appearance with stainless steel design
- Optimized energy efficiency and performance with EC fans
- High-quality, easy-to-clean materials
- Easy access to internal components for cleaning and service

### Standard configuration

- Fan-assisted air circulation
- Different display decks and heights
- Stainless steel construction
- Inclined display area

# Glycos

## Pastry products to highlight your day

With this modern and stylish serve-over cabinet, your pastry goods can be presented in a tasty and appealing way. Whether on the chilled bottom deck or on the non-refrigerated glass shelves, the goods are always perfectly presented and the illumination from the top brings additional brightness. Flexibility is given by a remote or plug-in version to suit the shop owner's preference.

Its compact depth brings advantages where every centimeter counts and the refrigerated compartment allows storage of goods for easy and quick refill of the presentation area.

### Benefits at a glance

- Stylish serve-over cabinet to highlight your pastry presentation
- Modern, straight glass design with unobstructed views of the goods
- Compact depth for places where every centimeter counts
- Easy-to-fill presentation area with refrigerated base shelf and 2 glass shelves
- Refrigerated compartment as additional storage room
- Flexibility in operation and positioning with remote or plug-in version

### Standard configuration

- Ventilated cabinet with stainless steel interior
- Remote (CO<sub>2</sub>) or Plug-in (R452A) version
- Straight front glass
- Compact depth (bottom deck: 615 mm)
- Refrigerated bottom shelf and 2 non-refrigerated glass shelves
- Refrigerated storage room with hinged window opening doors
- LED lighting at the top
- Thermostatic exp. valve

### Options

- Controllers
- Electronic valves
- Display deck stainless steel or Corian®
- Front & side bumper squared 20×20
- Castors (swiveling)
- Different internal and external colors
- Cladding available upon request
- Rear sliding plexi doors
