

TAKE CONTROL OF YOUR INDOOR AIR QUALITY WITH THE SPOT COOLERS OPTICLEAN™

Wildfires are an unpredictable force of nature that can lead to potential long-term health risks. Smoke can enter indoor facilities carrying particulates that make the air unhealthy to breathe.

Take control of safety concerns and keep your operation running smoothly with **Spot Coolers OptiClean** dual-mode air scrubber & negative air machine. Each OptiClean unit's HEPA filter is 99.97% efficient at removing 0.3 micron diameter particulates from contaminated air. As an air scrubber, it can be used to pull air in and remove contaminants by discharging clean air back into the space. At a 1500 CFM operating level, the effective exchange rate is just under 10x per hour in a 9000 ft³ room.

WHAT SETS THIS SOLUTION APART:

- Available in two commercial sizes: 1500 CFM and 600 CFM
- Three-speed commercial blower system
- Extended life high-efficiency filtration
- Unbeatable run life that will continuously clean air 24/7

WHEN IT APPLIES:

Ideal for a wide range of commercial applications, including K-12 and higher-education classrooms, office spaces, warehouses, retail spaces and more. Apply OptiClean units on their own or in a Better Together™ combination with smaller solutions such as the Carrier Air Purifier.
